## **Abstracts**

According to Statistics MRC, the Global Insoluble Dietary Fibers Market is accounted for \$6.39 billion in 2020 and is expected to reach \$11.62 billion by 2028 growing at a CAGR of 7.7% during the forecast period. An increase in demand for functional foods and an increase in health consciousness among consumers due to the rising prevalence of health disorders are driving the market growth. However, the time and investment required for regulatory approval may hamper the market growth.

Insoluble dietary fibers consist of carbonates that are essential for the optimal metabolism rate in the human body. These substances help in maintaining a healthy digestive system as they are not absorbed by the body, which results in efficient functioning of all the systems.

Based on the application, the functional food segment is going to have lucrative growth during the forecast period due to the changing diet patterns, changing consumer food preferences toward high fiber foods such as cereals & grains along with carbohydrates enriched edible products, and growing prevalence of health disorders including cholesterol, obesity, and diabetes.

By geography, North America is going to have significant growth during the forecast period. An increase in the number of health-conscious consumers is driving the production of insoluble dietary fibers in the region. Consumers in this region are steadily becoming aware of the health benefits provided by insoluble dietary fibers and their significance in enhancing immunity.

Some of the key players profiled in the Insoluble Dietary Fibers Market include Archer Daniels Midland Company, Cargill Incorporated, Ceamsa, DuPont, GlaxoSmithKline
