## Abstracts

According to Statistics MRC, the Global Intravascular Ultrasound [IVUS] Devices Market is accounted for \$360.32 million in 2020 and is expected to reach \$676.87 million by 2028 growing at a CAGR of 8.2% during the forecast period. The technological advancements, inclination towards less invasive procedures, increase in the image output quality and developments in the image-guided therapeutic treatment are driving the market growth. However, high costs and lack of uniform reimbursement are hampering the growth of the market.

Intravascular ultrasound (IVUS) is a medical imaging methodology using a specially designed catheter with a miniaturized ultrasound probe attached to the distal end. The proximal end of the catheter is attached to computerized ultrasound equipment. It allows the application of ultrasonic technology to visualize the blood vessels internally through the surrounding blood column.

Based on the modality, the IMap IVUS segment is going to have lucrative growth during the forecast period owing to its applications such as tissue characterization by using histology derived database and frequency spectrum and provides a better classification of plaque by involving more calculations than virtual histology.

By geography, North America is going to have high growth during the forecast period. The growth in this segment is owing to the factors such as advancements in technology, the growing prevalence of coronary artery diseases, and rapid growth in the healthcare infrastructure, and an increase in the number of diseases.

Some of the key players profiled in the Intravascular Ultrasound [IVUS] Devices Market include Allergan plc, AstraZeneca, Bayer HealthCare Pharmaceuticals, Biogen, Inc.,

GlaxoSmithKline Plc, H. Lundbeck A/S, Johnson & Johnson, Novartis AG, Parion Sciences, Inc., Pfizer Inc and Sanofi S.A.
