## Abstracts

According to Statistics MRC, the Global Kidney Function Tests Market is accounted for \$703.95 million in 2020 and is expected to reach \$1,312.64 million by 2028 growing at a CAGR of 8.1% during the forecast period. Factors such as the growing geriatric population, increasing prevalence of diabetes, and rising awareness regarding kidney diseases are driving the growth of the market. However, unfavorable healthcare reforms in various countries are hampering the growth of the market.

Kidney function tests are procedures that usually use either the blood or urine to help identify issues in the kidneys. These tests are performed to check if the kidneys are filtering waste products too slowly and to see if the kidneys are leaking proteins into the urine. Regular kidney function tests help to identify issues in early stages, making it possible to halt the progress of the disease.

Based on the type, the urine tests segment is anticipated to expand at a rapid pace during the forecast period which can be attributed to the ease in sample collection and very low risk of infection. By geography, North America is going to have high growth during the forecast period owing to the well-established healthcare infrastructure in the region, coupled with the favorable reimbursement policies & government initiatives.

Some of the key players profiled in the Kidney Function Tests Market include F. Hoffmann-La Roche, Siemens Healthineers, Danaher Corporation (Beckman Coulter, Inc), Nova Biomedical, Abbott, Cook Medical, Baxter International Inc, Quest Diagnostics, Laboratory Corporation of America Holdings (LabCorp), Sysmex, Randox Laboratories, Opti Medical, Acon Laboratories, Urit Medical, and Arkray.
