Abstracts

According to Statistics MRC, the Global Liquid Fertilizers Market is accounted for \$12,405.33 million in 2020 and is expected to reach \$18,050.88 million by 2028 growing at a CAGR of 4.8% during the forecast period. The adoption of accuracy farming, endangered agriculture & rapid growth in greenhouse vegetable production and growth in demand for improved high-efficiency fertilizers are driving the market growth. However, lack of awareness about application practices among farmers is hampering the growth of the market.

Liquid fertilizers boost the efficiency of the soil by altering its water-retaining and airing capacity. Vital micronutrients such as copper, iron, manganese, zinc, and macronutrients such as nitrogen, phosphate, and potassium are delivered to the soil or to the crops directly in the form of liquid fertilizers for improving crop production. Liquid fertilizers are substances derived from natural or synthetic sources, which supply plant nutrients that are vital for the healthier growth of plants.

Based on the type, the nitrogen segment is going to have lucrative growth during the forecast period. Nitrogen is one of the most-extensively consumed nutrients among all the macro and microelements essential for plant growth. It is used to form amino acids, which harvest proteins, and take part in nearly each biochemical reaction executed in a plant. The most common problem that farmer faces, is the insufficient nitrogen (N) availability in the soil. Therefore, further liquid nitrogen fertilization is requisite to eliminate this problem. Urea, ammonium nitrate, ammonium sulfate, and calcium nitrate are generally accessible nutrient sources of liquid nitrogen. Furthermore, numerous amalgamations of nutrients are manufactured and used to offer nutrition to plants.

By geography, Asia Pacific is going to have high growth during the forecast period. The factors, such as the poor nutrition management, heavy reliance on nitrogenous liquid fertilizer, declining soil fertility, fragile marketing and distribution systems, lack of

complementary inputs, rising concern over the current pattern of liquid fertilizer use, and lack of complementary inputs there is an amplified need to advance liquid fertilizer's effectiveness in the province. Additionally, these disquiets have given way to liquid bio-fertilizer and liquid micronutrient fertilizer being advanced in the region.

Some of the key players profiled in the Liquid Fertilizers Market include Agrium Inc, Yara International ASA, Agroliquid Compo Expert GmbH, FoxFar Soil And Fertilizer Company, Haifa Chemicals Ltd.
