Abstracts

According to Statistics MRC, the Global Low Temperature Negative Pressure Evaporator Market is accounted for \$241.7 million in 2026 and is expected to reach \$424.8 million by 2034 growing at a CAGR of 7.3% during the forecast period. Negative pressure at low temperatures specialized machinery called evaporators is used to evaporate liquids at lower pressures and temperatures. These systems work under vacuum, allowing the evaporation of heat-sensitive or volatile compounds without exposing them to high temperatures that would compromise their quality. In contrast, traditional evaporators usually operate at greater temperatures. Sensitive materials experience less thermal stress when these evaporators are operating at lower temperatures. This is especially helpful for materials that are easily degraded or undergo chemical property changes under high temperatures.

Market Dynamics:

Driver:

Increased demand for heat-sensitive product processing

The market for low temperature negative pressure evaporator is growing as a direct result of the need for heat-sensitive product processing. Heat-sensitive materials can evaporate with these evaporators since they are made especially to run at lower pressures and temperatures without deteriorating the substance over time. There is an increasing need for them as industry look for more accurate and efficient ways to

manage these compounds. Thus, the need for low temperature negative pressure evaporators is growing throughout all industries that deal with heat-sensitive materials, not just one or two. This broadens the market for producers and providers of these evaporators, giving them the ability to serve a variety of businesses looking for dependable methods for handling sensitive materials which drives the growth of the market.

Restraint:

Complexity of operations

For the installation, use, and upkeep of low temperature negative pressure evaporator systems, complex activities sometimes call for specialized workers. Some companies may be discouraged from using these evaporators due to the possible rise in operating expenses associated with the need for specialized staff and training. In businesses where simplicity of operation and maintenance are important elements for technological adoption, the complexity of operations may slow down the rate of adoption of low temperature negative pressure evaporators. This might obstruct these systems' quick commercial growth. Moreover, industries may face difficulties in recruiting and maintaining qualified workers due to the requirement for specific training in order to operate and maintain these equipments hampering the growth of the market.

Opportunity:

Rising focus on sustainability and technological advancements

An increasing focus on sustainability is pushing firms to look out environmentally responsible ways to run their businesses. Compared to conventional evaporator systems, low temperature negative pressure evaporator use less energy and have a less environmental effect since they operate at lower temperatures and pressures. As a result, the market for these evaporators is expanding as more enterprises use them to boost their sustainability profiles. Constant technological innovation enhances their performance, efficiency, and capacities. Technological improvements such as advanced materials, improved heat exchange mechanisms, greater automation, and sophisticated control systems help to make these evaporators more efficient, dependable, and flexible to meet a range of industrial applications.

Threat:

Energy consumption concerns

For the companies that use these evaporators, the high energy consumption of low temperature negative pressure evaporator systems might lead to higher operating expenses. Potential customers who are sensitive to operational costs may be put off by this issue, especially if the energy cost is greater than the technology's supposed advantages. Moreover, these are thought to be more environmentally friendly than typical evaporators, but only if they use a substantial amount of energy. This is because they operate at lower pressures and temperatures. This might lead to companies searching for ways to reduce their carbon impact by using less energy impeding the growth of the market.

Covid-19 Impact

Lockdowns and other measures to stop the virus's spread caused several industries to reduce or temporarily stop operations. Businesses concentrated on sustaining vital operations, which resulted in a decline in the need for new equipment, including of low temperature negative pressure evaporators, as a result of the decline in industrial activity. Global supply chains were disrupted by the pandemic, which had an effect on the manufacture and delivery of raw materials and component parts needed to produce of low temperature negative pressure evaporator systems. The delivery and installation of these evaporators were hampered by supply chain delays, which may have slowed down projects or new installations.

The single effect segment is expected to be the largest during the forecast period

The single effect segment is estimated to have a lucrative growth, as in terms of energy consumption, single-effect evaporators are less effective than multiple-effect evaporators. They frequently demand a greater energy input to evaporate and this might affect consumer preferences in favour of energy-efficient and more efficient systems, which could have an effect on the pace at which single-effect evaporators are adopted in this market segment. As the market shifts toward efficiency and sustainability, companies may favour low temperature negative pressure evaporator or other sophisticated evaporator systems over single-effect models.

The chemical processing segment is expected to have the highest CAGR during the forecast period

The chemical processing segment is anticipated to witness the highest CAGR growth

during the forecast period, as the chemical processing industry frequently works with volatile solvents, fragile chemicals, and heat-sensitive components. Without exposing these materials to extreme heat, these provide a way to recover solvents and concentrate them while maintaining their integrity and quality. The driving force behind advancement in, low temperature negative pressure evaporator technology is the requirement for more accurate and effective chemical processing methods.

Region with largest share:

Asia Pacific is projected to hold the largest market share during the forecast period owing to the rapid industrialization that has occurred throughout the Asia Pacific area, including in South Korea, China, India, Japan, and Southeast Asian states. In industries like chemicals, pharmaceuticals, food and beverage, and wastewater treatment, there is a greater need than ever for eco-friendly and productive technology, such low temperature negative pressure evaporators. To address concerns with waste management and pollution, a number of Asia-Pacific nations have been tightening their environmental laws.

Region with highest CAGR:

North America is projected to have the highest CAGR over the forecast period, because of innovation in industrial technology is encouraged by the region's emphasis on research and development. The development of low temperature negative pressure evaporator in the North American market is fuelled by investments in R&D projects targeted at raising environmental sustainability, cutting operational costs, and increasing evaporator efficiency. The requirement for such sustainable solutions is met by them, which can handle heat-sensitive materials while minimizing energy usage and environmental effect thus driving the growth of the market in this region.

Key players in the market

Some of the key players profiled in the Low Temperature Negative Pressure Evaporator Market include EVAPCO, Alfa Laval, API Schmidt-Bretten, BUCHI Corporation, Buss-SMS-Canzler GmbH, De Dietrich, ENCON Evaporators, GEA Group, HORIBA STEC, JBT Corporation, Normit, NTE Process Srl, Okawara Mfg. Co., Ltd, Praj Industries, REDA S.p.A, SPX Flow, TABANLI MAKINA SAN VE TIC LTD STI, Thermo Fisher Scientific, TMW Technologies and Wenzhou Ace Machinery Co., Ltd

Key Developments:

In November 2023, EVAPCO Launches 'World's First' Packaged Low-Charge Ammonia Mega-Split Refrigeration System. VersaSplit, with up to 165TR (580kW) refrigeration capacity, doubles the capacity of Evapco's roof-mounted Penthouse 70TR (246kW) unit and brings versatility to the industrial market

In August 2023, SFC Pioneer Sepiatec acquired by BUCHI, Sepiatec, an innovative pioneer in Supercritical Fluid Chromatography Systems, headquartered in Berlin, has been acquired by Swiss lab equipment manufacturer BUCHI Labortechnik AG.

In May 2022, ENCON Launches ENCON-Link Remote monitoring software for evaporators, ENCON-Link will send alarm notifications to operators and management allowing hands off operation of the evaporator increasing uptime of the evaporator and freeing up the evaporator operator

Types Covered:

Single Effect

Multi Effect

End Users Covered:

Food & Beverage Industry

Chemical Processing

Environmental & Wastewater Treatment

Renewable Energy and Biofuels

Oil & Gas Industry

Laboratory & Research

Pharmaceuticals & Biotechnology

Other End Users

Regions Covered:

North America

US

Canada

Mexico

Europe

Germany

UK

Italy

France

Spain

Rest of Europe

Asia Pacific

Japan

China

India

Australia

New Zealand

South Korea

Rest of Asia Pacific

South America

Argentina

Brazil

Chile

Rest of South America

Middle East & Africa

Saudi Arabia

UAE

Qatar

South Africa

Rest of Middle East & Africa

What our report offers:

Market share assessments for the regional and country-level segments

Strategic recommendations for the new entrants

Covers Market data for the years 2023, 2024, 2025, 2026, 2027, 2028, 2030, 2032 and 2034

Market Trends (Drivers, Constraints, Opportunities, Threats, Challenges, Investment Opportunities, and recommendations)

Strategic recommendations in key business segments based on the market

estimations

Competitive landscaping mapping the key common trends

Company profiling with detailed strategies, financials, and recent developments

Supply chain trends mapping the latest technological advancements

Free Customization Offerings:

All the customers of this report will be entitled to receive one of the following free customization options:

Company Profiling

Comprehensive profiling of additional market players (up to 3)

SWOT Analysis of key players (up to 3)

Regional Segmentation

Market estimations, Forecasts and CAGR of any prominent country as per the client's interest (Note: Depends on feasibility check)

Competitive Benchmarking

Benchmarking of key players based on product portfolio, geographical presence, and strategic alliances

Contents

1 EXECUTIVE SUMMARY

2 PREFACE

- 2.1 Abstract
- 2.2 Stake Holders
- 2.3 Research Scope
- 2.4 Research Methodology
 - 2.4.1 Data Mining
 - 2.4.2 Data Analysis
 - 2.4.3 Data Validation
 - 2.4.4 Research Approach
- 2.5 Research Sources
 - 2.5.1 Primary Research Sources
 - 2.5.2 Secondary Research Sources
 - 2.5.3 Assumptions

3 MARKET TREND ANALYSIS

- 3.1 Introduction
- 3.2 Drivers
- 3.3 Restraints
- 3.4 Opportunities
- 3.5 Threats
- 3.6 End User Analysis
- 3.7 Emerging Markets
- 3.8 Impact of Covid-19

4 PORTERS FIVE FORCE ANALYSIS

- 4.1 Bargaining power of suppliers
- 4.2 Bargaining power of buyers
- 4.3 Threat of substitutes
- 4.4 Threat of new entrants
- 4.5 Competitive rivalry

5 GLOBAL LOW TEMPERATURE NEGATIVE PRESSURE EVAPORATOR MARKET,

BY TYPE

- 5.1 Introduction
- 5.2 Single Effect
- 5.3 Multi Effect

6 GLOBAL LOW TEMPERATURE NEGATIVE PRESSURE EVAPORATOR MARKET, BY END USER

- 6.1 Introduction
- 6.2 Food & Beverage Industry
- 6.3 Chemical Processing
- 6.4 Environmental & Wastewater Treatment
- 6.5 Renewable Energy and Biofuels
- 6.6 Oil & Gas Industry
- 6.7 Laboratory & Research
- 6.8 Pharmaceuticals & Biotechnology
- 6.9 Other End Users

7 GLOBAL LOW TEMPERATURE NEGATIVE PRESSURE EVAPORATOR MARKET, BY GEOGRAPHY

- 7.1 Introduction
- 7.2 North America
 - 7.2.1 US
 - 7.2.2 Canada
 - 7.2.3 Mexico
- 7.3 Europe
 - 7.3.1 Germany
 - 7.3.2 UK
 - 7.3.3 Italy
 - 7.3.4 France
 - 7.3.5 Spain
 - 7.3.6 Rest of Europe
- 7.4 Asia Pacific
 - 7.4.1 Japan
 - 7.4.2 China
 - 7.4.3 India
 - 7.4.4 Australia

- 7.4.5 New Zealand
- 7.4.6 South Korea
- 7.4.7 Rest of Asia Pacific
- 7.5 South America
 - 7.5.1 Argentina
 - 7.5.2 Brazil
 - 7.5.3 Chile
 - 7.5.4 Rest of South America
- 7.6 Middle East & Africa
 - 7.6.1 Saudi Arabia
 - 7.6.2 UAE
 - 7.6.3 Qatar
 - 7.6.4 South Africa
 - 7.6.5 Rest of Middle East & Africa

8 KEY DEVELOPMENTS

- 8.1 Agreements, Partnerships, Collaborations and Joint Ventures
- 8.2 Acquisitions & Mergers
- 8.3 New Product Launch
- 8.4 Expansions
- 8.5 Other Key Strategies

9 COMPANY PROFILING

- 9.1 EVAPCO
- 9.2 Alfa Laval
- 9.3 API Schmidt-Bretten
- 9.4 BUCHI Corporation
- 9.5 Buss-SMS-Canzler GmbH
- 9.6 De Dietrich
- 9.7 ENCON Evaporators
- 9.8 GEA Group
- 9.9 HORIBA STEC
- 9.10 JBT Corporation
- 9.11 Normit
- 9.12 NTE Process Srl
- 9.13 Okawara Mfg. Co., Ltd
- 9.14 Praj Industries

- 9.15 REDA S.p.A
- 9.16 SPX Flow
- 9.17 TABANLI MAKINA SAN VE TIC LTD STI
- 9.18 Thermo Fisher Scientific
- 9.19 TMW Technologies
- 9.20 Wenzhou Ace Machinery Co., Ltd
