Abstracts

According to Statistics MRC, the Global Medical Foods Market is accounted for \$20.15 billion in 2020 and is expected to reach \$35.14 billion by 2028 growing at a CAGR of 7.2% during the forecast period. Factors such as increasing geriatric population, rising adoption of healthy alternatives, and high expenditure in healthcare sector by governments in developed economies are driving the market growth. However, lack of awareness related to proper use of medical foods is hampering the growth of the market.

Food intended to meet nutritional requirements and/or metabolic deficiencies in an individual suffering from a particular disease is termed as medical food. It is specially formulated for a patient and is intended to be used under supervision of medical or health professionals. Medical foods offer patients an effective therapeutic tool for managing pain, sleep, and cognitive disorders without many of the risks associated with pharmaceutical drugs.

Based on the route of administration, the oral segment is going to have a lucrative growth during the forecast period which can be attributed to the high commercial viability of orally administered products as well as its ease of consumption. By geography, North America is expected to grow at a faster rate during the forecast period owing to the increasing unhealthy lifestyle among individuals in the region.

Some of the key players profiled in the Medical Foods Market include Reckitt Benckiser Group plc, Abbott Laboratories, Danone S.A., Nestlé S.A., Mead Johnson, BioMarin Pharmaceutical, Ajinomoto Cambrooke Inc, Fresenius SE & Co. KGaA, Targeted Medical Pharma Inc, Accera Inc, Alfasigma S.p.A., Metagenics Inc, Meiji Holdings and Co Ltd, Cerecin Inc, and Primus Pharmaceuticals Inc.
