## Abstracts

According to Statistics MRC, the Global Melt Electrowriting Market is accounted for \$19.59 billion in 2025 and is expected to reach \$30.25 billion by 2032 growing at a CAGR of 6.4% during the forecast period. Melt Electrowriting (MEW) is an advanced additive manufacturing technique that integrates principles of electrospinning and melt extrusion to fabricate high-resolution, micron-scale 3D structures. In MEW, a heated polymer melt is extruded through a nozzle while a high-voltage electric field stretches and aligns the molten jet into ultrafine fibers (
