According to Statistics MRC, the Global Mobile Satellite Services (MSS) Market is accounted for \$6.17 billion in 2020 and is expected to reach \$15.51 billion by 2028 growing at a CAGR of 12.2% during the forecast period. The rising integration demands of satellite and terrestrial mobile technology, emerging advancements in digital technology and increasing focus of data applications and services are the major factors driving the market growth. However, policy and regulatory issue is restraining the market growth.

Mobile satellite services (MSS) supply two way voice and data communication to global users who are on the go or in remote locations; terminals range in size from handheld to laptop-size units, the communication service is offered by using satellites. Terminals can also be mounted in a vehicle, with communications keep going while the vehicle is moving. MSS works at L-band—low enough in the frequency spectrum to keep away from the rain fade associated with higher bandwidth Ku%li%and Ka-band fixed satellite systems.

Based on service, the voice services segment is estimated to have a lucrative growth due to the rise in the number of devices that are used in commercial applications to provide voice calls that are used for calling and messaging in remote locations including desert, sea, and air. By geography, North America is going to have high growth during forecast period. As, North America has achieve extensive support from government to employ high throughput connectivity in the satellite fleet in different orbits and different programs like Future Satellite Communications Service Acquisition (FCSA) etc. are propelling the growth of the market.
