Abstracts

According to Statistics MRC, the Global Mold Release Agents accounted for \$1.57 billion in 2017 and is expected to reach \$2.89 billion by 2026 growing at a CAGR of 7.0% during the forecast period. Increasing production and sales of automobiles, increasing expenditure on research activities and rising crude oil production are some key factors influencing the market growth. In addition, growing infrastructure development in emerging economies will provide ample opportunities for the market growth. However, factors such as fluctuating raw material prices and easy availability of alternative non-stick coatings are hampering the market growth.

Mold release agents are primarily used for protecting mold surfaces against destructive compounds and also for easily releasing parts from complex dies. Mold Release Agents are chemicals used to prevent adhesion of molding surfaces to substrates. These chemical agents create a boundary between the mold surface and substrate in order to stop the mixing of surface and substrate.

Based on Type, water-based mold release agents segment held significant market share during the forecast period. The water based mold release agents are non-flammable. One common application for water-based parting agents involves the use of concrete molds. By geography, Asia Pacific is expected to grow at a faster rate due to presence of more number of key players and continuous growth of plastics.

Some of the key players in Mold Release Agents market include Chem-Trend L. P., McGee Industries, Inc., Croda International PLC, Shin-Etsu Chemical Co., Ltd., Lanxess Group, Lord Corporation, Michelman Inc. ,Henkel AG & Co. KGaA , Daikin Industries Ltd., Marbocote Ltd., Miller-Stephenson Inc and Tag Chemicals GmbH.
