Abstracts

According to Statistics MRC, the Global Molecular Sieves Market is accounted for \$3,683.00 million in 2020 and is expected to reach \$5,870.14 million by 2028 growing at a CAGR of 6.0% during the forecast period. Increasing demand for processing from the oil and gas industry and rising awareness about the treatment of hazardous organic materials in wastewater are driving the market growth. However, the threat from chemical composites, enzymes, and other substitutes may hamper the market growth.

Molecular sieves are adsorbents and can be used as desiccants, with uniform pore sizes. Molecular sieves are primarily used for the separation of permanent gases like hydrogen, oxygen, nitrogen, carbon monoxide, and inert gases and low molecular weight linear and branched-chain hydrocarbons.

Based on shape, the pelleted segment is going to have lucrative growth during the forecast period. The pellet molecular sieve has better properties compared to other shaped molecular sieves. It has very high water adsorption capacity and mechanical strength and at the same time very low attrition loss. The main use is in the air & associated gas drying.

By geography, Asia Pacific is going to have high growth during the forecast period due to the increasing demand for surfactants and the major role of molecular sieves in nuclear industries to remove nuclear waste will boost the molecular sieves in the Asia Pacific region.

Some of the key players profiled in the Molecular Sieves include Arkema, Axens, BASF SE, Cabot Corporation, CarboTech, Clariant, Dalian Absorbent Co., Ltd, Desicca Chemicals Pvt.Ltd., Hengye Inc., Honeywell International Inc, JIUZHOU CHEMICALS, KNT Group, Kuraray Co., Ltd., Luoyang Jalon Micro-Nano New Materials Co., Ltd, Merck KGaA, and Sorbead India.
