According to Statistics MRC, the Mulch Film market is expected to grow from \$3.30 billion in 2016 to reach \$5.75 billion by 2023 with a CAGR of 8.3%. Growing concern in agriculture regarding soil moisture had given rise to the demand for mulch films in the market. Increasing global population and subsequent demand for food coupled with factors affecting the soil moisture had fueled up the market. The difficulty in removing mulch films from the priceless fertile land with causing pollution is one of the factor affecting the market.

LLDPE followed by LDPE segment dominate the market in terms of revenue on account of its widely favorable mechanical and chemical resistance properties coupled with its economical context. Black mulch segment is estimated to dominate the product type market, attributing to its high end agricultural use in the farming.
