Abstracts

According to Statistics MRC, the Global Nematicides Market is accounted for \$1.30 billion in 2020 and is expected to reach \$1.98 billion by 2028 growing at a CAGR of 5.4% during the forecast period. Strong demand for high-value crops, advancements in farming practices and technology and crop losses due to pest attacks are driving the market growth. However, pesticide residue problems is hampering the growth of the market.

Nematicides are a type of chemical pesticides which are used to kill plant-parasites nematodes. They are used on fruits & vegetables such as potatoes, tomatoes, pineapples and so on. Other than providing protection from the parasites it also helps in increasing fertility of soil.

Based on the type, the bionematicides segment is going to have lucrative growth during the forecast period owing to the increasing awareness among consumers about the importance of organic foods. The adoption of sustainable agriculture and integrated pest management solutions has increased which has led to the demand for biocontrol products such as biopesticides, biofungicides, pheromones, and bionematicides. A number of major players in the market are introducing bionematicide solutions for seed treatment.

By geography, North America is going to have high growth during the forecast period. The region is a host to some of the major companies in the nematicides market who actively invest on new product launches that would cater to nematode attacks on field crops such as cotton, corn and soybean which are majorly produced in countries such as the US and Mexico.

Some of the key players profiled in the Nematicides Market include Adama Agricultural Solutions, American Vanguard Corporation, BASF SE, Bayer CropScience, Dow

Chemical Company, DuPont, FMC Corporation, Isagro Group Spa, Marrone Bio Innovations, Inc., Monsanto Company, Nufarm Limited, Simbiose Agro, Stoller, Sumitomo Chemical and Syngenta International AG.
