## Abstracts

According to Statistics MRC, the Global Network Configuration and Change Management (NCCM) Market is accounted for \$1,645.31 million in 2020 and is expected to reach \$3,351.27 million by 2028 growing at a CAGR of 9.3% during the forecast period. Increased network size and complexity as a direct consequence of the organization's global expansion, network automation, and multi-vendor device support and industry compliance are driving the market growth. However, reluctance to change the standard procedures is hampering the growth of the market.

The network configuration and change management solutions help to minimize human errors resulting from manual configuration changes, thereby reducing network downtime and degradation. These solutions continuously monitor device configurations, and provide real-time notifications & alerts whenever a configuration change occurs, which helps in better management of network configuration files in a multi-vendor network environment.

Based on the component, the software segment is anticipated to have lucrative growth during the forecast period, due to the presence of many software providers and rising demand for cloud-based software solutions. Software constitutes the components of a network configuration and change management solution. Many enterprises are deploying such solutions to efficiently manage their complex network architecture.

By geography, North America is expected to have significant growth during the forecast period, owing to continuous investments and focus on network configuration, change management among enterprises of all sizes, and increasing demand for cloud-based software solutions. The presence of several software providers in the market is another factor that significantly contributed to the growth of North America's network

configuration and change management market.
