Abstracts

According to Statistics MRC, the Global Next?Generation EV Charging Networks Market is accounted for \$11.88 billion in 2026 and is expected to reach \$47.14 billion by 2034 growing at a CAGR of 18.8% during the forecast period. Next-Generation EV Charging Networks form a sophisticated infrastructure framework built to accommodate the expanding adoption of electric vehicles. By combining high-speed charging stations, smart grid integration, renewable power inputs, and battery storage solutions, these systems improve performance and dependability. Advanced technologies such as IoT connectivity, artificial intelligence-based energy management, and real-time data analytics help minimize charging durations and regulate power distribution effectively. Features like mobile app access, contactless payments, and vehicle-to-grid functionality enhance user experience while supporting grid resilience. With accelerating global electrification initiatives, these innovative charging networks play a critical role in enabling efficient and sustainable mobility systems.

According to the IEA Global EV Outlook 2023, the number of publicly accessible charging points worldwide reached 2.7 million at the end of 2022, with 900,000 added during that year — a 55% increase compared to 2021.

Market Dynamics:

Driver:

Rapid growth in electric vehicle adoption

The swift expansion of electric vehicle usage across global markets significantly fuels the growth of next-generation charging networks. Growing sustainability concerns, favorable policy incentives, tighter emissions standards, and falling battery prices are motivating individuals and enterprises to adopt EVs. As more passenger cars and commercial fleets become electric, the requirement for dependable, high-speed, and widely distributed charging stations rises steadily. Increasing urban populations and corporate fleet electrification amplify infrastructure needs. To accommodate growing EV volumes and alleviate range anxiety, advanced charging systems featuring ultra-fast technology and intelligent network integration are becoming critical to building efficient and future-ready mobility frameworks worldwide.

Restraint:

High initial infrastructure costs

Elevated setup expenses associated with advanced EV charging infrastructure significantly restrict market expansion. Establishing high-power stations requires investments in equipment, electrical grid enhancements, property procurement, and intelligent management platforms. Additional technologies, including cooling mechanisms and battery storage systems, add to overall project budgets. For many investors, extended return-on-investment timelines and unpredictable demand levels increase financial uncertainty. In developing regions, insufficient capital availability and limited governmental incentives further delay network rollout. Such economic challenges impede large-scale installation efforts and slow the global penetration of sophisticated and next-generation charging solutions.

Opportunity:

Development of ultra-fast and wireless charging

Innovation in rapid and cable-free charging systems opens new pathways for infrastructure development. Ultra-high-capacity chargers shorten refueling durations, increasing practicality for individual users and fleet operators. Inductive wireless charging technologies provide added convenience by removing the need for plugs and manual handling. Such advancements enable broader installation across smart cities,

parking facilities, and automated transport systems. Continuous improvements in electrical components and safety mechanisms enhance system reliability. As consumers prioritize speed and simplicity, deploying advanced and next-generation charging formats offers strong competitive advantages and fuels sustained growth in the evolving EV ecosystem.

Threat:

Intense market competition and price wars

Growing rivalry among infrastructure providers, energy companies, and technology firms represents a major challenge for advanced charging networks. Rapid expansion by multiple participants intensifies competition, often driving down service prices and compressing margins. Promotional pricing tactics and strategic partnerships can escalate into prolonged price competition, impacting financial stability. Established corporations with substantial resources may dominate smaller operators, encouraging consolidation trends. Such competitive pressures create investment risks and reduce incentives for continuous technological advancement, potentially slowing balanced and sustainable growth of next-generation EV charging infrastructure worldwide.

Covid-19 Impact:

The outbreak of COVID-19 initially hindered expansion in advanced EV charging infrastructure as global supply chains were disrupted and infrastructure projects faced postponements. Movement restrictions reduced transportation activity, temporarily weakening demand for public charging services. Production constraints limited access to essential hardware and technological components. Despite short-term setbacks, the crisis encouraged governments to prioritize sustainable recovery initiatives and clean energy investments. Emphasis on resilient infrastructure, digital transformation, and environmentally friendly mobility stimulated renewed funding and policy support. Consequently, the market regained momentum after the pandemic, establishing a stronger foundation for long-term and sustainable growth.

The AC charging segment is expected to be the largest during the forecast period

The AC charging segment is expected to account for the largest market share during the forecast period because of its extensive presence and economic advantages. It is widely utilized in residential complexes, office buildings, and public parking areas where vehicles are stationary for longer durations, allowing sufficient charging time. Compared

to high-power alternatives, AC systems require lower investment and are easier to maintain, encouraging large-scale implementation. Their seamless integration with standard electrical grids further supports expansion. Since routine commuting demands can typically be fulfilled through steady overnight charging, AC charging remains the most prevalent and established infrastructure choice in the market.

The public segment is expected to have the highest CAGR during the forecast period

Over the forecast period, the public segment is predicted to witness the highest growth rate. Rising electric vehicle ownership and policy-backed deployment strategies are increasing installation of charging stations in urban areas and transportation routes. Public facilities are essential for enabling long-distance travel and enhancing driver confidence. Strong participation from energy providers, private investors, and traditional fuel companies further accelerates network rollout. With the growth of electric fleets and mobility services, demand for widely accessible charging hubs is rising significantly, positioning the public segment as the most rapidly expanding category.

Region with largest share:

During the forecast period, the Asia Pacific region is expected to hold the largest market share owing to substantial electric vehicle penetration and proactive infrastructure development strategies. Growing urban centers, increasing consumer purchasing power, and heightened focus on emission reduction have fueled demand for electric mobility. Regional authorities provide financial incentives and policy support to accelerate charging network deployment. The strong manufacturing base for electric vehicles and battery technologies enhances supply chain efficiency. Additionally, investments in smart grid systems and renewable energy projects contribute to sustained infrastructure expansion, reinforcing Asia-Pacific's leadership in the global charging network landscape.

Region with highest CAGR:

Over the forecast period, the Europe region is anticipated to exhibit the highest CAGR, driven by ambitious climate goals and comprehensive regulatory frameworks. Stringent emissions policies and strong governmental backing are encouraging large-scale deployment of charging facilities across highways and urban centers. Rising electric vehicle ownership among individuals and fleet operators fuels infrastructure demand. Harmonized charging standards and partnerships between energy providers and technology companies improve network integration. With sustainability initiatives deeply

embedded in policy agendas, Europe is rapidly expanding its next-generation charging systems, positioning the region for accelerated and sustained market growth.

Key players in the market

Some of the key players in Next-Generation EV Charging Networks Market include Blink Charging, Chargefox, ChargePoint, Electrify America, EVgo, Fastned, Ionia, ABB Ltd., Allego N.V., Beam Global, Siemens AG, TATA Power Limited, Tesla, Inc., TotalEnergies SE, Bosch, Shell Recharge, FLO and Rivian Adventure Network.

Key Developments:

In February 2026, Siemens announced the acquisition of Canopus AI, an innovator in computational and AI-driven metrology solutions, enabling semiconductor manufacturers to achieve new levels of precision and efficiency in wafer and mask inspection processes. This acquisition strengthens Siemens' position in the semiconductor manufacturing ecosystem and expands its semiconductor design and manufacturing digital thread by integrating additional cutting-edge metrology technologies, enhanced with advanced AI capabilities.

In October 2025, ABB has signed a term sheet agreement with Dutch renewable energy company Switch2 to engineer and supply automation and electrification solutions for Switch2's floating production, storage and offloading (FPSO) unit dedicated to producing green ammonia from green hydrogen.

In September 2025, Bosch and Alibaba Group announced an expanded strategic partnership to accelerate digital transformation through advanced cloud computing and AI technologies. The enhanced collaboration will focus on cloud-based enterprise operations, AI-driven business innovations, and e-commerce expansion.

Charger Types Covered:

AC Charging

DC Fast Charging

Wireless Charging

Power Outputs Covered:

Up to 3.7 kW

3.7-22 kW

22-100 kW

100-350 kW

Above 350 kW

Connector Types Covered:

CHAdeMO

CCS (Combined Charging System)

Type 2

Other Connector Types

Ownership Models Covered:

Membership Networks

Non-Membership / Pay-Per-Use

Installation Types Covered:

Fixed Charging Stations

Portable Charging Units

Connectivities Covered:

Standalone

Smart Connected

Applications Covered:

Residential

Commercial

Public

End Users Covered:

Private Consumers

Fleet Operators

Government & Municipalities

Other End Users

Regions Covered:

North America

United States

Canada

Mexico

Europe

United Kingdom

Germany

France

Italy

Spain

Netherlands

Belgium

Sweden

Switzerland

Poland

Rest of Europe

Asia Pacific

China

Japan

India

South Korea

Australia

Indonesia

Thailand

Malaysia

Singapore

Vietnam

Rest of Asia Pacific

South America

Brazil

Argentina

Colombia

Chile

Peru

Rest of South America

Rest of the World (RoW)

Middle East

Saudi Arabia

United Arab Emirates

What our report offers:

- Market share assessments for the regional and country-level segments
- Strategic recommendations for the new entrants
- Covers Market data for the years 2023, 2024, 2025, 2026, 2027, 2028, 2030, 2032 and 2034
- Market Trends (Drivers, Constraints, Opportunities, Threats, Challenges, Investment Opportunities, and recommendations)
- Strategic recommendations in key business segments based on the market estimations
- Competitive landscaping mapping the key common trends
- Company profiling with detailed strategies, financials, and recent developments
- Supply chain trends mapping the latest technological advancements

Free Customization Offerings:

All the customers of this report will be entitled to receive one of the following free customization options:

Company Profiling

Comprehensive profiling of additional market players (up to 3)

SWOT Analysis of key players (up to 3)

Regional Segmentation

Market estimations, Forecasts and CAGR of any prominent country as per the client's interest (Note: Depends on feasibility check)

Competitive Benchmarking

Benchmarking of key players based on product portfolio, geographical presence, and strategic alliances

Contents

1 EXECUTIVE SUMMARY

- 1.1 Market Snapshot and Key Highlights
- 1.2 Growth Drivers, Challenges, and Opportunities
- 1.3 Competitive Landscape Overview
- 1.4 Strategic Insights and Recommendations

2 RESEARCH FRAMEWORK

- 2.1 Study Objectives and Scope
- 2.2 Stakeholder Analysis
- 2.3 Research Assumptions and Limitations
- 2.4 Research Methodology
 - 2.4.1 Data Collection (Primary and Secondary)
 - 2.4.2 Data Modeling and Estimation Techniques
 - 2.4.3 Data Validation and Triangulation
 - 2.4.4 Analytical and Forecasting Approach

3 MARKET DYNAMICS AND TREND ANALYSIS

- 3.1 Market Definition and Structure
- 3.2 Key Market Drivers
- 3.3 Market Restraints and Challenges
- 3.4 Growth Opportunities and Investment Hotspots
- 3.5 Industry Threats and Risk Assessment
- 3.6 Technology and Innovation Landscape
- 3.7 Emerging and High-Growth Markets
- 3.8 Regulatory and Policy Environment
- 3.9 Impact of COVID-19 and Recovery Outlook

4 COMPETITIVE AND STRATEGIC ASSESSMENT

- 4.1 Porter's Five Forces Analysis
 - 4.1.1 Supplier Bargaining Power
 - 4.1.2 Buyer Bargaining Power
 - 4.1.3 Threat of Substitutes
 - 4.1.4 Threat of New Entrants

- 4.1.5 Competitive Rivalry
- 4.2 Market Share Analysis of Key Players
- 4.3 Product Benchmarking and Performance Comparison

5 GLOBAL NEXT GENERATION EV CHARGING NETWORKS MARKET, BY CHARGER TYPE

- 5.1 AC Charging
- 5.2 DC Fast Charging
- 5.3 Wireless Charging

6 GLOBAL NEXT GENERATION EV CHARGING NETWORKS MARKET, BY POWER OUTPUT

- 6.1 Up to 3.7 kW
- 6.2 3.7-22 kW
- 6.3 22-100 kW
- 6.4 100-350 kW
- 6.5 Above 350 kW

7 GLOBAL NEXT GENERATION EV CHARGING NETWORKS MARKET, BY CONNECTOR TYPE

- 7.1 CHAdeMO
- 7.2 CCS (Combined Charging System)
- 7.3 Type
- 7.4 Other Connector Types

8 GLOBAL NEXT GENERATION EV CHARGING NETWORKS MARKET, BY OWNERSHIP MODEL

- 8.1 Membership Networks
- 8.2 Non-Membership / Pay-Per-Use

9 GLOBAL NEXT GENERATION EV CHARGING NETWORKS MARKET, BY INSTALLATION TYPE

- 9.1 Fixed Charging Stations
- 9.2 Portable Charging Units

10 GLOBAL NEXT GENERATION EV CHARGING NETWORKS MARKET, BY CONNECTIVITY

- 10.1 Standalone
- 10.2 Smart Connected

11 GLOBAL NEXT GENERATION EV CHARGING NETWORKS MARKET, BY APPLICATION

- 11.1 Residential
- 11.2 Commercial
- 11.3 Public

12 GLOBAL NEXT GENERATION EV CHARGING NETWORKS MARKET, BY END USER

- 12.1 Private Consumers
- 12.2 Fleet Operators
- 12.3 Government & Municipalities
- 12.4 Other End Users

13 GLOBAL NEXT GENERATION EV CHARGING NETWORKS MARKET, BY GEOGRAPHY

- 13.1 North America
 - 13.1.1 United States
 - 13.1.2 Canada
 - 13.1.3 Mexico
- 13.2 Europe
 - 13.2.1 United Kingdom
 - 13.2.2 Germany
 - 13.2.3 France
 - 13.2.4 Italy
 - 13.2.5 Spain
 - 13.2.6 Netherlands
 - 13.2.7 Belgium
 - 13.2.8 Sweden
 - 13.2.9 Switzerland

- 13.2.10 Poland
- 13.2.11 Rest of Europe
- 13.3 Asia Pacific
 - 13.3.1 China
 - 13.3.2 Japan
 - 13.3.3 India
 - 13.3.4 South Korea
 - 13.3.5 Australia
 - 13.3.6 Indonesia
 - 13.3.7 Thailand
 - 13.3.8 Malaysia
 - 13.3.9 Singapore
 - 13.3.10 Vietnam
 - 13.3.11 Rest of Asia Pacific
- 13.4 South America
 - 13.4.1 Brazil
 - 13.4.2 Argentina
 - 13.4.3 Colombia
 - 13.4.4 Chile
 - 13.4.5 Peru
 - 13.4.6 Rest of South America
- 13.5 Rest of the World (RoW)
 - 13.5.1 Middle East
 - 13.5.1.1 Saudi Arabia
 - 13.5.1.2 United Arab Emirates
 - 13.5.1.3 Qatar
 - 13.5.1.4 Israel
 - 13.5.1.5 Rest of Middle East
 - 13.5.2 Africa
 - 13.5.2.1 South Africa
 - 13.5.2.2 Egypt
 - 13.5.2.3 Morocco
 - 13.5.2.4 Rest of Africa

14 STRATEGIC MARKET INTELLIGENCE

- 14.1 Industry Value Network and Supply Chain Assessment
- 14.2 White-Space and Opportunity Mapping
- 14.3 Product Evolution and Market Life Cycle Analysis

14.4 Channel, Distributor, and Go-to-Market Assessment

15 INDUSTRY DEVELOPMENTS AND STRATEGIC INITIATIVES

- 15.1 Mergers and Acquisitions
- 15.2 Partnerships, Alliances, and Joint Ventures
- 15.3 New Product Launches and Certifications
- 15.4 Capacity Expansion and Investments
- 15.5 Other Strategic Initiatives

16 COMPANY PROFILES

- 16.1 Blink Charging
- 16.2 Chargefox
- 16.3 ChargePoint
- 16.4 Electrify America
- 16.5 EVgo
- 16.6 Fastned
- 16.7 Ionity
- 16.8 ABB Ltd.
- 16.9 Allego N.V.
- 16.10 Beam Global
- 16.11 Siemens AG
- 16.12 TATA Power Limited
- 16.13 Tesla, Inc.
- 16.14 TotalEnergies SE
- 16.15 Bosch
- 16.16 Shell Recharge
- 16.17 FLO
- 16.18 Rivian Adventure Network
