## Abstracts

According to Statistics MRC, the Global Ozone Generation Market is accounted for \$821.54 million in 2017 and is expected to reach \$1,724.26 million by 2026 growing at a CAGR of 8.6% during the forecast period. Some of the key drivers for the market include increasing demand from emerging economies, rising demand for air purification systems and rapid urbanization & industrialization. Furthermore, severe government regulations, growing demand from a variety of end use industries and emission reduction targets are the other factors enhancing market growth. However, high pricing of products is hampering the ozone generators market.

Ozone generation is mainly used for water treatment and air purification/treatment. Water treatment alone accounts for more than three-fourth of the total market for ozone generation. Ozone generation is also used for bio-waste treatment and size effluent. The use of ozone for bio-waste treatment reduces the consumption of energy and chemical treatment which helps in minimizing the overall cost associated with bio-waste treatment. Other application of ozone include as a sanitizer. Ozone generation sanitizer is considered to be a cost effective and eco friendly solution to usual methods of sanitization which uses toxic chemicals. Ozone generation sanitizer uses only electricity and oxygen making it a safer and apt replacement for traditional methods.

Based on Technology, the Cold Plasma ozone generation segment accounted for considerable market share during the forecast period. In this technique, the gas is somewhat ionized and created in room temperature. The ionization takes place between two electrodes, which are separated by an insulating barrier. Geographically, Asia Pacific is likely to grab major revenue shares in market and is expected to grow with a high CAGR during the forecast period. This growth is due to expansion of the manufacturing and construction industries and fast industrialisation in China and India.
