Rising demand for the rapid pace of industrial development, green environmental regulations, growing number of end-use industries and increasing interest of the global population in architecture are driving the global market. However, factors such as stringent and regulatory policies and environmental challenges are restraining the market growth.

Paints & coatings are composed of either organic or inorganic resins and are the inseparable when it comes to industrial sectors. They are used to impart a glossy and decorative finish to the surface of a product such as metal component, equipment, walls, and others. These coatings are applied on the surface to enhance the durability as well as the performance of the products. They offer excellent adhesion, high corrosion & abrasion resistant, which made them favorable in large application spectrum. Paints & coatings market plays an important role in the chemical industry and represents massive numbers in terms of global production and consumption.

Amongst Resins, Acrylic segment held considerable market share and is expected to grow substantially over the forecast period owing to its excellent stabilization and weathering properties. Acrylic resins are extensively used in water reducible and emulsion resins for manufacturing of coats and varnishes. Its features include weather/UV resistance, optical clarity and excellent dimensional stability. The thermoplastic nature of acrylic is an advantage over epoxy and polyester.

By geography, Asia-Pacific is the largest market for the global market during the forecast period. There is an increase in demand from construction in Asia-Pacific, which

is mostly backed by the expansion of the region's increasing household activities. This increased demand, in turn, drives the market in Asia-Pacific.
