## **Abstracts**

According to Statistics MRC, the Global Pancreatic Cancer market is accounted for \$1,904.20 million in 2017 and is expected to reach \$4,728.19 million by 2026 growing at a CAGR of 10.6% during the forecast period. Advancement of technology in therapeutic devices and expanding prevalence of cancer growth are the factors driving the market. However, accessibility of costly treatment and poor repayment strategies in the emerging regions of the world are some of the factors which may hamper the market growth during the forecast period.

Pancreatic Cancer is a type of cancer that starts in the pancreas. It is a highly lethal disease, for which mortality closely parallels incidence. Most patients with Pancreatic Cancer remain asymptomatic until the disease reaches an advanced stage. There is no standard programme for screening patients at high risk of Pancreatic Cancer. Most Pancreatic Cancers arise from microscopic non-invasive epithelial proliferations within the pancreatic ducts, referred to as pancreatic intraepithelial neoplasias.

Based on the treatment, the biologic therapy has a huge demand due to expanding number of novel upcoming immunotherapies as well as focused cell therapy that treats the cancer with no extreme symptoms and has more number of helpful advantages over the conventional chemotherapies.

By geography, Asia Pacific is growing lucratively during the forecast period owing to the nearness of quickly creating medicinal services innovation, high patient population, and high social insurance use. Additionally, expanding interest for new treatment strategies in nations like India and South Korea is probably going to develop as the quickest developing business sector over the globe.

Some of the key players in the Pancreatic Cancer market include Novartis Ag, Eli Lilly and Company, F. Hoffmann-La Roche AG, Pharmacyte Biotech, Inc, Clovis Oncology, Celgene Corporation, Teva Pharmaceutical Industries Ltd., Amgen, Inc., Pfizer, Inc. and Merck & Co., Inc.
