Abstracts

According to Statistics MRC, the Global Plastic Films and Sheets Market is accounted for \$101687.90 million in 2017 and is expected to reach \$176413.68 million by 2026 growing at a CAGR of 6.3% during the forecast period. Some of the key factors fueling the market growth include increased demand for bioplastic materials, increasing demand from emerging economies, rising prominence of eco-friendly and lower cost of plastic films & sheets. However, regulations restricting the use of non-biodegradable plastics and easy availability of substitutes are hampering the market.

Plastic film and sheet are flat pieces of plastic formed to a precise thickness for use in specific applications. Products differ in terms of materials, properties, and dimensions. Plastic films & sheets are basically made up of polypropylene and polyethylene. They are used in the non-packaging and packaging industry. The non-packaging sector includes consumer goods, construction, medical and agriculture.

Amongst product, Polyvinyl Chloride segment held steady growth during the predicted period. Polyvinyl Chloride (PVC) is one of the most widely used plastics. It is produced by polymerizing vinyl chloride monomers. It has an amorphous structure with polar chlorine atoms and possesses fire retarding properties, durability, and oil/chemical resistance. By geography, Asia Pacific dominated the market due to numerous technological developments, particularly in the food & beverage and pharmaceutical industry.
