Abstracts

According to Statistics MRC, the Global Polyethylene Glycol Market is accounted for \$4.84 billion in 2020 and is expected to reach \$8.51 billion by 2028 growing at a CAGR of 7.3% during the forecast period. Factors such as the growing building and construction industry, rising demand for water-based coatings and paints, and increasing popularity of cosmetic products are driving the growth of the market. However, the availability of alternatives is hampering the growth of the market.

Polyethylene glycol is a polymeric material composed of ethylene oxide and water as monomers which are hydrophilic and biocompatible, though it is a synthetic molecule produced by polymerization of ethylene oxide where a ring-opening takes place.

Based on the application, the healthcare (pharmaceuticals) segment is anticipated to expand at a rapid pace during the forecast period as the non-toxic nature of polyethylene glycol makes it a desirable component in ointments, fillers and tablets. By geography, Asia Pacific is going to have high growth during the forecast period owing to the industrial growth taking place in the developing economies like India and China.

Some of the key players profiled in the Polyethylene Glycol Market include BASF, Croda, Dow Chemical Company, Liaoning Kelong, Taijie Chemical, India Glycols, Liaoning Oxiranchem, Lotte Chemical, Huangma Chemical, Ineos, Shanghai Bronkow Chemical, and Jiangsu Hai'an Petrochemical Plant.
