Abstracts

According to Statistics MRC, the Polytetrafluoroethylene (PTFE) market is expected to grow from \$3.86 billion in 2016 to reach \$5.78 billion by 2023 with a CAGR of 5.9%. The polymerization of monomer tetrafluoroethylene has given rise to PTFE. The chemical properties (excellent heat resistance, optimum dielectric properties etc.) of PTFE are providing wide usage opportunity for the market. The increasing demand for non-stick cookware and rising application of PTFE in automotive sector will boost the market.

Among end user, automotive segment is estimated to dominate the market on account of its distinguishing properties of the material as compared to other conventional materials. Moreover, micronized powder is estimated to dominate the form market owing to its low molecular weight these are used in paints, coatings, inks and grease. Asia Pacific region held the dominant market share on account of persistent growth in the regional chemical industry.

Some of the key players in the Polytetrafluoroethylene (PTFE) market include 3M Company,
