However, less adoption rate among end users is one of the major factors hindering the market.

Based on product, digital handheld refractometers instrument are used for measuring the refractive index of materials. These digital handheld refractometers are easy to utilize, consistent and reasonable instruments and are available in a wide choice of single and multi-scales. The versatility of digital handheld refractometers makes them suitable for the testing of fruit juices, jam, honey, soft drinks, ripeness of fruit, sugar content of beet and cane juices, sauces, soluble oils, detergents, anti-freeze and numerous other materials during the production process.

By geography, North America dominated the global market over the forecast period due to increased adoption of refractometers for analysing food and beverages.
