Abstracts

According to Statistics MRC, the Global Returnable Transport Packaging (RTP) Market is expected to grow at a CAGR of 9.3% during the forecast period. Some of the key factors propelling the market growth are increasing demand for modern grocery retailing, stringent government regulations by the government. However, the high initial costs are hampering the market growth. Furthermore, the technological advancements occurring in this market are considered as the future growth opportunity of the market.

Returnable transport packaging comprises the packaging system that uses the reusable containers, drums, dunnage, sacks, pallets, and racks. These are used to safely transport the products throughout the supply chain system. The basic purpose is to make repetitive use of the packaging. It is the mechanical and the automotive industries that make maximum use of the returnable transport packaging. In the returnable transport packaging, the packaging materials that are used repeatedly are the same.

Based on circulation method, pooling system segment is projected to be the growing segment as it is the most efficient model for complex supply chain operations. In this model, a pooling operator is the owner of the returnable transport packaging products and ensures that barriers in the logistics process do not affect supply chain operations.

By geography, North America provides potential growth opportunities owing to the increased adoption of the returnable transport packaging system by the food and beverage industry.
