According to Statistics MRC, the Global Rigid Plastic Packaging Market is accounted for \$248.75 billion in 2020 and is expected to reach \$446.95 billion by 2028 growing at a CAGR of 7.6% during the forecast period. While the factors like strong demand from the food and beverage packaging industry and low cost of rigid plastic are propelling the market growth. However, stringent laws & regulations pertaining to plastic industries are hampering the market growth.

Rigid plastic packaging as the name suggests refers to a type of packaging technique that involves the usage of plastic material. Rigid plastic material can be defined as the material that exhibits no elastic deformation and perfect plastic deformation and it has a relatively inflexible shape or form. Rigid plastic packaging comprises cups, bottles, closures, pots, and cans.

Based on the end user, the food segment is estimated to have a huge demand during the forecast period owing to the factors that can be attributed to reduce food loss and increase the shelf-life of food products. The expectations of food quality, hygiene, and growing health awareness enhance the demand for the food segment.

By geography, the Asia Pacific is going to have a lucrative growth due to factors such as rising disposable income, increasing consumer expenditure, and growing population.
