## Abstracts

According to Statistics MRC, the Global Silage Additives Market is accounted for \$1.47 billion in 2017 and is expected to reach \$2.42 billion by 2026 growing at a CAGR of 5.6% from 2017 to 2026. Favourable government regulations, demand for quality meat and development in silage quality are some of the key factors propelling the market growth. However, less awareness among the consumers and increase in feed additives industry are hindering the market growth.

Silage additives are essential in animal nutrition as they are means to develop silage quality and control the conservation process so that by the time of feeding it has retained as many of the nutrients present in the original fresh forage as possible. That in turn improves the animal performance and health; consequently improving the yield and quality of food from animal origin. Silage additive thus help make top quality forage into excellent quality silage.

Based on form, the liquid segment is expected to have a considerable growth in the market owing to the amplified preference for liquid additives due to their easiness in handling, storage, and transport. Liquid concentrates are extremely preferred for application, due to the increased use of chemical additives in developing countries.

Based on geography, North America is estimated to have a significant growth in the market during the forecast period. The growth is due to the increase in awareness and enlarge in the manufacture of corn silage in the US and Canada.

Some of the key players in the Silage Additives Market are BASF, Nutreco, American Farm Products, Dupont Pioneer, Lallemand, Josera, Micron Bio-Systems, Chr. Hansen, Volac, Addcon, Schaumann Bioenergy, Scotmin, ForFarmers, BrettBrothers, ADM, KW Forage System, Carrs Billington, Wynnstay Group and Envirosystems.
