According to Statistics MRC, the Global Single Loop Controller market is accounted for \$93.98 million in 2017 and is expected to reach \$120.50 million by 2026 growing at a CAGR of 2.8% during the forecast period. The introduction of hybrid high-temperature controllers as a substitute to a PLC device and growing savings toward power generation projects are some of the key factors driving the market growth. However, the stagnant expansion of oil & gas industry is hindering the growth.

Single loop controllers are easy to use devices used in temperature and other processes to control one specific variable. Single loop controllers are front-of-panel products. These controllers are available to ensure precise control for demanding applications as fundamental devices with core functions, to those with highly developed features. These controllers have a high visibility display for amplified clarity that enables important process information and alarm messages.

Based on the application, the Oil & gas plants seized to be the major market share of the single loop controller market as many of oil & gas companies are establishing their drilling operations in distant locations, the focus of these companies on security and efficiency is dynamic. By Geography, North America is to embrace's the main contribution towards the single loop controller market in coming years owing to the increasing demand for factory automation solutions and industrial control due to the rising acceptance of automation in industries such as automotive, aerospace & defense, chemicals, food & beverages, and pharmaceuticals are the claim for single loop controllers in North America.
