## Abstracts

According to Statistics MRC, the Global Soft Tissue Repair Market is accounted for \$19.98 billion in 2020 and is expected to reach \$41.30 billion by 2028 growing at a CAGR of 9.5% during the forecast period. The increasing healthcare expenditure & lack of substitutes for soft tissue repair surgery are the factors driving the market growth. However, the high cost of surgical procedures is hampering the growth of the market.

Soft tissue injuries involve damage to muscles, tendons, and ligaments that result in pain and inflammation. The soft tissue repair process is characterized by replacing the injured or damaged tissues with healthy tissues. The current treatment options rely heavily on surgical procedures, which have a low success rate. Therefore, it is imperative to find superior, technologically advanced alternatives such as minimally invasive procedures and rapid healing products.

Based on the type, the orthopedic repair segment is going to have lucrative growth during the forecast period due to the growing number of trauma and sports-related injury cases worldwide. By geography, North America is going to have high growth during the forecast period due to the well-established healthcare infrastructure and increased awareness regarding potential benefits of soft tissue repair and the products utilized in the procedures.
