According to Statistics MRC, the Global Soil Aerators Market is accounted for \$22.55 billion in 2017 and is expected to reach \$46.23 billion by 2026 growing at a CAGR of 8.3% during the forecast period. Rise in population & demand for food, rise in net farm income due to mechanization, increase in residential and commercial landscaping are some of the key driving factor for the market growth. However, lack of consciousness of soil aerators and small & fragmented land holding opposing the usage of heavy farm equipment are negatively impacting the market. Moreover, innovations in soil aerator type provides ample of opportunities for the market growth.

By mode of operation, the mounted segment is estimated to control the market and is projected to grow at a higher CAGR. The segment is driven by due to the higher precision, low turnaround time and accessibility of large land holdings for agriculture. By application, agriculture segment is driven by raise in large-scale holdings of farmers in most urbanized countries and a rising tendency of farm automation in developing countries. The quick rise in population growth and growing demand for food are predicted to drive the soil aerators market growth.

By geography, The Asia Pacific is the largest growing market owing to the increase in farm mechanization levels for both agricultural and non-agricultural sector, and reduced cost of production.
