Abstracts

According to Statistics MRC, the Global Space Debris Removal Market is accounted for \$1.33 billion in 2025 and is expected to reach \$6.97 billion by 2032 growing at a CAGR of 26.7% during the forecast period. Space debris removal focuses on technologies and services aimed at eliminating or mitigating non-functional satellites, rocket parts, and orbital fragments threatening active space assets. Growing satellite launches and congested orbits drive urgency for removal solutions. The market is supported by government initiatives, international collaboration, and private sector innovation. Techniques include robotic arms, nets, lasers, and drag sails. Increasing investments in space sustainability, safety regulations, and commercialization of low-Earth orbit are creating opportunities for companies developing space debris removal technologies worldwide.

According to the European Space Agency's 2024 Space Environment Report, more than 35,000 objects are tracked in Earth orbit, the majority being debris, highlighting collision risks that motivate active debris removal.

Market Dynamics:

Driver:

Rising satellite launches and congested orbits

The unprecedented surge in commercial satellite deployments, particularly mega-constellations in Low Earth Orbit (LEO), is the primary market driver. This activity drastically increases the probability of on-orbit collisions, generating new debris and exacerbating the Kessler Syndrome risk. Consequently, there is a critical and growing demand for sophisticated monitoring and management solutions to protect high-value assets, ensure long-term orbital sustainability, and comply with emerging space traffic management (STM) protocols. This necessity directly fuels investment in surveillance networks, data analytics, and collision avoidance services, propelling market growth.

Restraint:

Extremely high technology development costs

Market expansion is significantly constrained by the exorbitant costs associated with developing, deploying, and maintaining advanced space debris monitoring infrastructure. This includes substantial capital expenditure for ground-based radar and optical telescopes, as well as space-based surveillance satellites. Moreover, the sophisticated software required for precise orbit determination (POD) and conjunction analysis requires continuous investment in R&D. These high entry barriers limit participation to well-funded government agencies and large corporations, potentially stifling innovation and competition within the private sector.

Opportunity:

Growth of satellite servicing markets

Effective debris monitoring and characterization are fundamental prerequisites for any on-orbit servicing (OOS) or ADR mission, providing precise data required for rendezvous and proximity operations (RPO). This creates a synergistic relationship, where the growth of servicing directly drives demand for advanced, high-fidelity tracking and data services. Companies that can provide this critical support infrastructure are positioned to capture significant value in this nascent but high-growth ecosystem.

Threat:

Geopolitical tensions in space governance

The market faces a significant threat from the lack of a unified international regulatory framework and escalating geopolitical tensions concerning space domain awareness (SDA). Disagreements over data sharing, ownership of debris, and norms of behavior can lead to fragmentation of monitoring efforts and the development of incompatible, proprietary systems. Additionally, the dual-use nature of SDA technology, which can serve both civilian monitoring and military space surveillance purposes, further complicates international collaboration and poses a risk to the global interoperability of debris tracking networks.

Covid-19 Impact:

The pandemic initially disrupted the space debris monitoring market through supply chain delays, manufacturing halts, and the postponement of non-essential satellite launches, which temporarily slowed demand for new monitoring contracts. However, the crisis also underscored the criticality of space-based infrastructure and accelerated the adoption of digital, remote monitoring solutions. Furthermore, as launch activities rebounded sharply, the congested orbital environment heightened focus on space sustainability, ultimately reinforcing the long-term necessity for robust debris management systems post-pandemic.

The Low Earth Orbit (LEO) segment is expected to be the largest during the forecast period

The Low Earth Orbit (LEO) segment is expected to account for the largest market share during the forecast period due to its extreme congestion from mega-constellations and its critical economic importance. This orbital regime hosts the vast majority of active satellites and debris objects, creating an immediate and pressing need for continuous surveillance to prevent catastrophic collisions. The commercial viability of large-scale projects like SpaceX's Starlink directly depends on effective debris management in LEO, driving significant investment from both private operators and government agencies in tracking and mitigation technologies specifically tailored to this region.

The less than 1 cm (Micro-debris) segment is expected to have the highest CAGR during the forecast period

Over the forecast period, the less than 1 cm (micro-debris) segment is predicted to witness the highest growth rate. This is driven by the escalating recognition that micro-debris, while individually small, poses a severe cumulative threat due to its immense

population and hypervelocity impact energy, which can degrade or terminate satellite missions. Technological advancements in radar and optical sensor resolution are improving detection capabilities for these smaller objects. Moreover, accurate modeling of the micro-debris environment is becoming essential for risk assessment, spacecraft shielding design, and ensuring mission longevity, fueling segment growth.

Region with largest share:

During the forecast period, the North America region is expected to hold the largest market share. This dominance is attributed to the presence of major space agencies like NASA and the Space Force, substantial defense budgeting for Space Domain Awareness (SDA), and a high concentration of leading private satellite operators and monitoring technology firms. Additionally, stringent national regulatory requirements for debris mitigation and a proactive approach to establishing space traffic management (STM) protocols further consolidate North America's leading position in deploying and advancing debris monitoring infrastructure.

Region with highest CAGR:

Over the forecast period, the Asia Pacific region is anticipated to exhibit the highest CAGR. This accelerated growth is fueled by rapidly expanding national space programs in China, India, and Japan, which include ambitious satellite deployment and interplanetary missions. Increasing government investment in indigenous space surveillance capabilities to protect these assets is a key factor. Moreover, the growing participation of private companies in the space sector across the region is creating a vibrant ecosystem that demands advanced debris monitoring and collision avoidance services.

Key players in the market

Some of the key players in Space Debris Removal Market include Astroscale, Airbus, ClearSpace, D-Orbit, Kall Morris Incorporated, LeoLabs, Northrop Grumman, Obruta Space Solutions, Rogue Space Systems, Surrey Satellite Technology, Starfish Space, and Turion Space.

Key Developments:

In August 2025, Turion Space announced Starfire NEXUS, an on-orbit compute platform that complements its DROID satellites for space domain awareness and

resiliency—capabilities directly supporting orbital debris management and future removal services.

In May 2025, Starfish Space announced readiness to launch its docking demonstration mission with its Otter vehicle in LEO, a key step toward satellite servicing that supports debris?mitigating life?extension and relocation services.

In April 2025, Astroscale U.S. announced it will lead the first-ever on?orbit refueling of a United States Space Force asset in GEO in 2026, advancing ISAM capabilities that underpin sustainable operations and reduce future debris creation.

Debris Sizes Covered:

Less than 1 cm (Micro-debris)

1 cm to 10 cm (Small debris)

Greater than 10 cm (Large debris)

Orbit Types:

Low Earth Orbit (LEO)

Medium Earth Orbit (MEO)

Geostationary Orbit (GEO)

Service Types Covered:

Debris Monitoring & Tracking

Active Debris Removal

On-Orbit Servicing & Life Extension

De-orbiting Support Services

Removal Technologies Covered:

Direct Debris Removal (Contact)

Indirect Debris Removal (Contactless)

End Users Covered:

Government & Defense Agencies

Commercial Satellite Operators

Research & Space Agencies

Other End Users

Regions Covered:

North America

US

Canada

Mexico

Europe

Germany

UK

Italy

France

Spain

Rest of Europe

Asia Pacific

Japan

China

India

Australia

New Zealand

South Korea

Rest of Asia Pacific

South America

Argentina

Brazil

Chile

Rest of South America

Middle East & Africa

Saudi Arabia

UAE

Qatar

South Africa

Rest of Middle East & Africa

What our report offers:

- Market share assessments for the regional and country-level segments
- Strategic recommendations for the new entrants
- Covers Market data for the years 2024, 2025, 2026, 2028, and 2032
- Market Trends (Drivers, Constraints, Opportunities, Threats, Challenges, Investment Opportunities, and recommendations)
- Strategic recommendations in key business segments based on the market estimations
- Competitive landscaping mapping the key common trends
- Company profiling with detailed strategies, financials, and recent developments
- Supply chain trends mapping the latest technological advancements

Free Customization Offerings:

All the customers of this report will be entitled to receive one of the following free customization options:

Company Profiling

Comprehensive profiling of additional market players (up to 3)

SWOT Analysis of key players (up to 3)

Regional Segmentation

Market estimations, Forecasts and CAGR of any prominent country as per the client's interest (Note: Depends on feasibility check)

Competitive Benchmarking

Benchmarking of key players based on product portfolio, geographical presence, and strategic alliances

Contents

1 EXECUTIVE SUMMARY

2 PREFACE

- 2.1 Abstract
- 2.2 Stake Holders
- 2.3 Research Scope
- 2.4 Research Methodology
 - 2.4.1 Data Mining
 - 2.4.2 Data Analysis
 - 2.4.3 Data Validation
 - 2.4.4 Research Approach
- 2.5 Research Sources
 - 2.5.1 Primary Research Sources
 - 2.5.2 Secondary Research Sources
 - 2.5.3 Assumptions

3 MARKET TREND ANALYSIS

- 3.1 Introduction
- 3.2 Drivers
- 3.3 Restraints
- 3.4 Opportunities
- 3.5 Threats
- 3.6 Technology Analysis
- 3.7 End User Analysis
- 3.8 Emerging Markets
- 3.9 Impact of Covid-19

4 PORTERS FIVE FORCE ANALYSIS

- 4.1 Bargaining power of suppliers
- 4.2 Bargaining power of buyers
- 4.3 Threat of substitutes
- 4.4 Threat of new entrants
- 4.5 Competitive rivalry

5 GLOBAL SPACE DEBRIS REMOVAL MARKET, BY DEBRIS SIZE

- 5.1 Introduction
- 5.2 Less than 1 cm (Micro-debris)
- 5.3 1 cm to 10 cm (Small debris)
- 5.4 Greater than 10 cm (Large debris)

6 GLOBAL SPACE DEBRIS REMOVAL MARKET, BY ORBIT TYPE

- 6.1 Introduction
- 6.2 Low Earth Orbit (LEO)
- 6.3 Medium Earth Orbit (MEO)
- 6.4 Geostationary Orbit (GEO)

7 GLOBAL SPACE DEBRIS REMOVAL MARKET, BY SERVICE TYPE

- 7.1 Introduction
- 7.2 Debris Monitoring & Tracking
- 7.3 Active Debris Removal
- 7.4 On-Orbit Servicing & Life Extension
- 7.5 De-orbiting Support Services

8 GLOBAL SPACE DEBRIS REMOVAL MARKET, BY REMOVAL TECHNOLOGY

- 8.1 Introduction
- 8.2 Direct Debris Removal (Contact)
 - 8.2.1 Robotic Arms
 - 8.2.2 Nets & Harpoons
 - 8.2.3 Tether Systems
- 8.3 Indirect Debris Removal (Contactless)
 - 8.3.1 Laser Systems
 - 8.3.2 Aerodynamic Drag Sails
 - 8.3.3 Ion Beams

9 GLOBAL SPACE DEBRIS REMOVAL MARKET, BY END USER

- 9.1 Introduction
- 9.2 Government & Defense Agencies
- 9.3 Commercial Satellite Operators

9.4 Research & Space Agencies

9.5 Other End Users

10 GLOBAL SPACE DEBRIS REMOVAL MARKET, BY GEOGRAPHY

10.1 Introduction

10.2 North America

10.2.1 US

10.2.2 Canada

10.2.3 Mexico

10.3 Europe

10.3.1 Germany

10.3.2 UK

10.3.3 Italy

10.3.4 France

10.3.5 Spain

10.3.6 Rest of Europe

10.4 Asia Pacific

10.4.1 Japan

10.4.2 China

10.4.3 India

10.4.4 Australia

10.4.5 New Zealand

10.4.6 South Korea

10.4.7 Rest of Asia Pacific

10.5 South America

10.5.1 Argentina

10.5.2 Brazil

10.5.3 Chile

10.5.4 Rest of South America

10.6 Middle East & Africa

10.6.1 Saudi Arabia

10.6.2 UAE

10.6.3 Qatar

10.6.4 South Africa

10.6.5 Rest of Middle East & Africa

11 KEY DEVELOPMENTS

- 11.1 Agreements, Partnerships, Collaborations and Joint Ventures
- 11.2 Acquisitions & Mergers
- 11.3 New Product Launch
- 11.4 Expansions
- 11.5 Other Key Strategies

12 COMPANY PROFILING

- 12.1 Astroscale
- 12.2 Airbus
- 12.3 ClearSpace
- 12.4 D-Orbit
- 12.5 Kall Morris Incorporated
- 12.6 LeoLabs
- 12.7 Northrop Grumman
- 12.8 Obruta Space Solutions
- 12.9 Rogue Space Systems
- 12.10 Surrey Satellite Technology
- 12.11 Starfish Space
- 12.12 Turion Space
