Abstracts

According to Statistics MRC, the Global Stents Market is accounted for \$11,649.12 million in 2020 and is expected to reach \$20,316.62 million by 2028 growing at a CAGR of 7.2% during the forecast period. Increasing number of patient pool with chronic disease, rapid technological advancements and growing number of coronary artery diseases are driving the market growth. However, high costs of stent implants treatment are hampering the growth of the market.

A stent is a short mesh tube acting as a scaffold in order to keep the artery open. It restores blood or other fluids, depending on where it is placed. Stent implants are most commonly employed to treat heart abnormalities such as blocked blood vessels. They are also employed in the ureter in order to prevent obstruction of urine from the kidney, in the gall bladder to allow passage of bile in patients, in the abdomen & gastrointestinal tract among others.

Based on the type, the balloon-expandable stents segment is going to have lucrative growth during the forecast period as they support high radial outward force owing to their long-term integrity, rigidity and higher elasticity. Focus of various market players to develop innovative products also contribute to the market growth. By geography, North America is going to have high growth during the forecast period due to the rise in incidences of cardiovascular diseases coupled with increasing geriatric population in the region.

Some of the key players profiled in the Stents Market include Abbott Laboratories, B. Braun, Melsungen AG, Biotronik SE & Co. KG, Boston Scientific Corporation, C.R. Bard, Inc., Elixir Medical Corporation, Medtronic plc, Microport Scientific Corporation, STENTYS S.A. and Terumo Corporation.
