According to Statistics MRC, the Global Surgical Sutures Market is expected to grow from \$3.82 billion in 2016 to reach \$5.84 billion by 2023 with a CAGR of 6.3%.

Increasing various surgical procedures, growing geriatric population coupled with chronic diseases, and advancements in product developments are some of the factors favouring the market growth. Furthermore, increasing healthcare awareness, encouraging government reimbursement policies are other factors bolstering the market growth. On the other hand, intensified competition among companies and stringent regulations are the constraints limiting the market growth.

The absorbable sutures segment leads the market globally with the biggest market share and is expected to grow with a high CAGR during the forecast period. The growth of this segment is attributed to increasing usage in internal organ surgeries. North America is leading the global market with a higher market share. Asia Pacific is projected to grow at a faster pace during the forecast period. Increasing government spending, growing numerous surgeries, and increasing in medical tourism are the factors contributing to the Asia Pacific market growth.
