## Abstracts

According to Statistics MRC, the Global System of Insight Market is accounted for \$1.47 billion in 2020 and is expected to reach \$6.42 billion by 2028 growing at a CAGR of 20.2% during the forecast period. Factors such as the increasing volume of big data and need for real-time actionable intelligence are driving the growth of the market. However, lack of integration with legacy architecture is hampering the growth of the market.

System of insight is a technology that collects, organizes, transforms, and analyzes data with statistical tools. The solution helps in obtaining new opportunities, operational behavior, and risks and therefore helps to identify the next step for business optimization.

Based on the application, the operations management segment is anticipated to expand at a rapid pace during the forecast period which can be attributed to the increasing demand for real-time information while managing the operations of the organization. By geography, Asia Pacific is going to have high growth during the forecast period owing to the growing adoption of IoT and connected devices and various government initiatives supporting the adoption of system of insight solutions.

Some of the key players profiled in the System of Insight Market include Oracle, IBM, SAP, SAS Institute, Signals Analytics, GoodData, Radicalbit, CoolaData, INETCO, TIBCO Software, Streamlio, Correlata, NGDATA, Plutora, and Striim.
