According to Statistics MRC, the Global Telepresence Robot Market is accounted for \$127.72 million in 2017 and is expected to reach \$569.80 million by 2026 growing at a CAGR of 18.1% during the forecast period. High demand for healthcare applications, increase in demand for teleconferences and growth in the use of smartphone are the key factors driving the market growth. In addition, technological advancements in robotics and extensive adoption from various end user sectors such as education and residential provide ample opportunities for the growth of the market. However, factors such as lack of secure communication and technical complexities are some factors hindering the market growth.

A telepresence robot is a remote-controlled, wheeled device that has wireless internet connectivity. Normally, the robot uses a tablet to provide video and audio capabilities. Telepresence robots are usually used to stand in for tour guides, night watchmen, factory inspectors, and healthcare consultants.
