Abstracts

According to Statistics MRC, the Global Tumor Ablation Devices market is estimated at \$260.60 million in 2015 and is expected to grow at a CAGR of 14.6% to reach \$676.66 million by 2022. . Rising incidences of cancers, technological advancements, growing aged population, rising numbers of hospitals and healthcare awareness are the key factors driving the market growth. However, negative effects related to ablation treatment and inadequate performance of the devices is hampering the market.

Radiofrequency commanded the technology segment in 2015 owing to its prominent application in solid tumor elimination in the body. On the contrary, microwave ablation technology is expected to observe remunerative growth during the predicted period due to advantages offered by this technology. Surgical procedures segment held major share of around 40% in 2015. However, percutaneous procedures are anticipated to observe productive growth over the forecast period owing to increasing demand for minimally invasive procedures offering sooner recovery and improved safety. The Asia-Pacific market is anticipated to grow at a faster pace during the forecast period owing to factors such as huge population with the high incidence of various cancers in the region.
