Abstracts

According to Statistics MRC, the Global Turbocompressor market is accounted for \$15.28 billion in 2020 and is expected to reach \$27.05 billion by 2028 growing at a CAGR of 7.4% during the forecast period. Increasing long trade between nations, rowing industrialization and growing number of wastewater treatment plants are the major factors driving the market growth. However, substitute products such as rotatory screw compressors are restraining the market growth.

Turbocompressor are turbo machines which concentrate a compressible gas with the help of a dynamic principle. In turbocompressor, the gas continuously enters into the rotating impeller through which the mechanical shaft power is distributed to the fluid with the help of the blades that results in a major pressure and temperature increase. The rest of the kinetic flow energy is then mostly converted into pressure in the diffuser. The compressed gas is then either transferred to a second compressor stage with the help of a return channel or collected in a volute.

Based on type, the axial turbocompressor segment is estimated to have a lucrative growth due to their extensive use in liquefied natural gas (LNG) transport and crude oil refineries. By geography, North America is going to have high growth during forecast period due to large number of ongoing shale gas and LNG projects and the increasing focus on the manufacturing sector in the region.

Some of the key players profiled in the Turbocompressor Market include Atlas Copco AB, Elliot Group Ltd, GE Oil & Gas, Howden Group Ltd, Kawasaki Heavy Industries, Kobe Steel Ltd, Man Diesel & Turbo, Mitsubishi Heavy Industries Ltd, Siemens AG, AVIME, Sagita, Sundyne Corporation, Bauer Compressors, Inc., Sullivan-Palatek, Inc. and Gardner Denver, Inc.
