Abstracts

According to Statistics MRC, the Global Ultrasonic Testing Market is accounted for \$2.80 billion in 2020 and is expected to reach \$5.62 billion by 2028 growing at a CAGR of 9.1% during the forecast period. Rising application of automation, stringent government regulations and growth in ultrasonic testing market services are driving the market growth. However, high cost of automated ultrasonic testing equipment is hampering the growth of the market.

Ultrasonic testing is an extremely valuable and a sort of non-destructive testing mechanism or technique to identify any kind of internal defect within the material for timely evaluation and diagnosis of faults in products. The ultrasonic technique detects hidden and internal discontinuities that are deep below the surface using the electronic equipment, which is connected to one or more transducers. This testing technique is also able to detect discontinuities that are based on how the high-frequency sound waves are returned to the recording equipment.

Based on the equipment, the flaw detectors segment is going to have lucrative growth during the forecast period as this detecting equipment is used to measure penetration of any material within a substance is perfect or not. This helps to detect any kind of flaw in the test and due to this there is rising in the market for this segment. By geography, North America is going to have high growth during the forecast period due to higher share of manufacturing industries, automotive, and power generation plant. This region is expected to be more dominant attributed to the increasing use of the UT technique for railway inspections across the US and Canada. The presence of key market players, such as Amerapex Corporation, General Electric, and others drive the market in the U.S. In addition, growing adoption of advanced testing technologies in the region's robust aerospace industry will further boost the regional market.

Some of the key players profiled in the Ultrasonic Testing Market include TechScan System Inc., General Motors, Ashtead Technology Ltd, Mistras Group, Inc., Olympus Corporation, British Institute of Non-Destructive Testing (BINDT), Zetec, Inc., Intertek, Magnaflux, Sonatest Ltd., NDT Systems Inc, Dakota Ultrasonics, General Electric, Eddyfi Technologies, Sonatest.
