According to Statistics MRC, the Global Utility Communication Market is accounted for \$17.87 billion in 2020 and is expected to reach \$29.36 billion by 2028 growing at a CAGR of 6.4% during the forecast period. Growing investment in smart grids and modernization of electricity networks and changing utility billing systems are driving the market growth. However, high initial investments are hampering the growth of the market.

Utility communication is a set of technologies and devices used to coordinate various parts of a complicated utilities distribution system. It monitors & controls grid equipment, measures network performance, and delivers real-time information. Efficient transfer of utilities such as power or gas is well-regulated by utility communication

Based on the application, the transmission & distribution (T&D) segment is going to have lucrative growth during the forecast period due to the increasing demand for electricity and replacement of aging power infrastructure is expected to drive the market. T&D operators depend on automatic systems to monitor and detect faults in their electrical networks and equipment. Many utility operators focus on maximizing investment in communication networks while ensuring reliable, secure data transmission. By geography, Europe is going to have high growth during the forecast period due to this region has the latest technological innovations in the utility communication network, significant investments, and effective digital global economy.
