According to Statistics MRC, the Global Veterinary Vaccines Market is accounted for \$6.44 billion in 2017 and is expected to reach \$11.73 billion by 2026 growing at a CAGR of 6.9% from 2017 to 2026. Growing figure of livestock disease, Increasing Adoption of Companion Animals and Rising frequency of Zoonotic diseases are some of the factors that are fuelling the market growth. On the other side, high costs are hampering the market growth. However, Awareness in emerging country regarding animal health provides ample opportunity to the market. Veterinary vaccines are important for animal health, animal welfare, food production, and public health. They are a cost-effective method to prevent animal disease among animals as well as humans.

On the basis of technology, DNA Vaccines uses a gene from a virus or bacteria to stimulate the immune system. They can be made in a short time span it is easier to make large amounts of a gene than make proteins or grow up bacteria or viruses. Speed is important when making a vaccine to strains of bacteria or virus that are constantly mutating and changing and does not need to be stored at low temperatures making transportation and storage cheaper and easier than conventional vaccines.

North America by geography among all other regions is expected to have highest market share throughout the forecasting period due to the awareness for prevention of animal-to-human transmission diseases and lower investment in research and development in the animal vaccine on compared to human vaccine area may propel the Veterinary Vaccines market.

Some of the key players of veterinary vaccines market include Jinyu Bio-Technology, China Animal Husbandry, Tianjin Ringpu, Biogenesis Bago, Idt Biologika, Hipra, Hester, Phibro Animal Health, Vetoquinol, Virbac, Merck Animal Health, Zoetis, Boehringer
