Abstracts

According to Statistics MRC, the Global Vitamins, Minerals, and Supplements Testing Market are expected to grow at a CAGR of 7.1% during the forecast period. Some of the key factors propelling the market growth are with increasing intentional and unintentional adulteration of food products and demand for testing of vitamins, minerals. However, increased demand for testing of food products hampers the market growth.

Based on Equipment, Fourier-Transform Infrared Spectroscopy (FTIR) Equipment segment is projected to be the growing segment. Fourier-transform infrared spectroscopy (FTIR) is a technique used to obtain an infrared spectrum of absorption or emission of a solid, liquid or gas. An FTIR spectrometer simultaneously collects high-spectral-resolution data over a wide spectral range. This confers a significant advantage over a dispersive spectrometer, which measures intensity over a narrow range of wavelengths at a time. Growth of the agricultural sector is expected to augment product demand over the next seven years.

By geography, the Asia Pacific provides potential growth opportunities in this region. This can be majorly attributed to the growing adoption of western lifestyle by people in countries such as India and China. Increasing consumption of packaged and processed food products in developing countries will also be a driving factor for the robust growth of the Vitamins, Minerals, and Supplements Testing market.

Some of the key players in Vitamins, Minerals, and Supplements Testing market include Adisseo, ADM, Avomeen Analytical Services, BASF, Bruker Corporation, Btisa Biotecnologías Aplicadas S.L, Farbest-Tallman Foods Corporation, Glanbia PLC, Great Plains Analytical Laboratory, Intertek Group, Koninklijke DSM N.V., Lonza Group, Premier Analytical Services, Rabar Pty Ltd, Showa Denko K.K., Sternvitamin GmbH &
