According to Stratistics MRC, the Global Voice Biometrics Market is accounted for \$1.10 billion in 2020 and is expected to reach \$4.99 billion by 2028 growing at a CAGR of 20.8% during the forecast period. Factors such as rising threat to security, growing demand for voice authentication, and growing need to reduce authentication costs are driving the growth of the market. However, high cost and privacy concerns are hampering the growth of the market.

Biometrics technology supports to recognize and validate the identity of an individual through physiological or behavioral uniqueness. The voice biometrics technology recognizes a person without any physical contact through the help of the system. This is done by comparing the recorded voice of the person with previously stored data in the system of the same person. Various voice recorders are utilized for this purpose.
