Abstracts

The Global Water Treatment Technologies market is accounted for \$34 billion in 2014 and is expected to reach \$65 billion by 2022 growing at a CAGR of 8.43%. The major driver of the market includes stringent government emission laws which allow the waste water coming from chemical industries and factories to be treated to an acceptable level, thus increasing the use of water treatment technologies. However, economic development including fast-paced urbanization particularly in emerging countries is propelling this need for efficient water management solutions.

Lack of awareness is one of the major challenges for this market, by creating awareness, companies and utilities work together to implement solutions that cut down the costs and improve both efficiency and water quality. Challenges faced by the companies include strict water quality standards, regulations on waste water discharge, and pressure on scarce water resources. The major trend driving the market is hasty increase in population both in developing countries and major urban centers. The market is well established in Europe and US with the increasing demand and the rate of using reclaimed water in the Asia Pacific markets especially in India is gaining pace. Industrial water treatment is a fastest growing segment in this industry.

The key players in the Water Treatment Technologies market include Air Products And Chemicals Inc., Ashland Corporation, BASF Se, Ecolab (Nalco Company), Lonza Group LTD., Cortec Corporation, The Dow Chemical Company, Akzonobel Nv, Bwa Water Additives UK Limited, and Buckman Laboratories International Inc.
