Abstracts

According to Statistics MRC, the Global Wireline Services market is accounted for \$6.32 billion in 2017 and is expected to reach \$13.17 billion by 2026 growing at a CAGR of 8.5% during the forecast period. Factors such as growing exploration and production activities, global demand for oil & gas, increased oil production, and exploration activities for shale gas are fuelling the market growth. However, increasing focus on renewable energy, stringent environmental rules and regulations, and decrease in crude oil prices are limiting the market growth.

Based on Technology, Electric line is associated to the devices such as switches, distribution boards, sockets and light fittings in a structure. Their size and type are specified based on the capability of holding operating voltage power. Most of the time electric line is used in the oil and gas industry to reduce and retrieve tools into wellbore so that it can transmit the data about the well conditions.

By Geography, Europe is expected to hold largest volume in contrast to other regions due to growing number of exploration and production projects and countries like germany and united kingdom's growth rate resources in shale gas production.
