Abstracts

According to Statistics MRC, the Global Zinc Sulfate Market is accounted for \$10.00 billion in 2020 and is expected to reach \$18.23 billion by 2028 growing at a CAGR of 8.1% during the forecast period. Growing demand as a supplement for lack of zinc deficiency, increasing demand from chemical industry, and need of zinc sulfate as a fertilizer additive are driving the market growth. However, stringent rules and regulations and its side effects due to heavy dosage is hampering the growth of the market.

Zinc sulfate is an inorganic compound produced by treating zinc-containing metal, oxides, or minerals with sulfuric acid. It is a colorless, odorless, and crystalline solid. Zinc sulphate is primarily used as a precursor and raw material for a multitude of applications, ranging from pharmaceuticals, agrochemicals, water treatment chemicals, and other niche applications.

Based on the application, the agrochemical segment is going to have lucrative growth during the forecast period as it is mostly applied to crops, especially pecans, deciduous fruits, peanuts, cotton, corn, and citrus, and added to feed for cattle and poultry. By geography, Asia Pacific is going to have high growth during the forecast period as it is mostly adopted in the region owing to its specialization and advancements and moreover, growing awareness among consumers for a healthy diet in the region increases demand for zinc supplements.

Some of the key players profiled in the Zinc Sulfate Market include Changsha Latian
