*Aircraft Potted-In Inserts Market by Aircraft Type (Narrow-Body Aircraft, Wide-Body Aircraft, Very Large Body...*

## The Global Aircraft Potted-In Inserts Market: Highlights

The global aircraft potted-in inserts market offers sizeable growth opportunities in the coming years and is likely to grow at a projected CAGR of 5.3% over the next five years. Increasing commercial and regional aircraft deliveries, increasing share of wide-body aircraft in total commercial aircraft deliveries, increasing commercial and regional aircraft fleet size, increasing demand for lightweight sandwich panels, and increasing demand for lightweight inserts are the key factors that are burgeoning the demand for potted-in inserts in the aircraft industry. Potted-in inserts are likely to remain the most preferred insert type for sandwich panels in the aircraft industry in the foreseeable future.

The global aircraft potted-in inserts market is segmented based on the aircraft type as Narrow-Body Aircraft, Wide-Body Aircraft, Very Large Body Aircraft, Regional Aircraft, and General Aviation. Narrow- and wide-body aircraft are expected to remain the growth engines of the aircraft potted-in inserts market during the forecast period of 2018 to 2023. Increasing production rates of key programs, such as B737, A320 family, B787, and A350XWB; market entry of new players, such as COMAC and Irkut; and an introduction of variants of existing aircraft programs, such as B737 max, A320neo, and B777x, are likely to offer a sustainable growth platform for potted-in inserts in these segments in the coming years.

On the basis of application type, the aircraft potted-in inserts market is segmented as Floor Panels, Sidewall Panels, Ceiling Panels, Stowage Bin Panels, Galley Panels, Lavatory Panels, Control Surface Panels, Fairing Panels, and Others. Floor panel is likely to remain the largest segment of the global potted-in inserts market in the aircraft industry during the forecast period. Large floor area of approximately 250.0 square meters (wide-body aircraft) coupled with increasing demand for potted-in inserts for panels in the aftermarket will continue to drive the growth of the segment over the next five years.

The global aircraft potted-in inserts market is also segmented based on the material type as Aluminum, Steel, Plastics, and Others. Aluminum is likely to maintain its dominance in the global aircraft potted-in inserts market during the forecast period. Aluminum offers a host of advantages over competing metals including good corrosion resistance, excellent mechanical properties, and lightweight and has a widespread usage in the fuselage, control surfaces, interior, engine, and other segments.

In terms of the panel type, the aircraft potted-in inserts market is segmented as Nomex Honeycomb Panels, Aluminum Honeycomb Panels, and Others. Nomex honeycomb panel is likely to remain the largest segment of the aircraft potted-in inserts market during the forecast period, owing to superior FST performance and higher strength-to-weight ratio. It is also lighter in weight as compared to other panels, such as aluminum honeycomb and balsa wood panels.

Based on the regions, North America is expected to remain the largest aircraft potted-in inserts market during the forecast period. The region is also expected to experience a healthy growth during the same period. The region is the manufacturing capital of the aircraft industry with the presence of several large- to small-sized aircraft OEMs, tier players, panel manufacturers, insert manufacturers, distributors, and raw material suppliers.

Asia-Pacific is likely to witness the highest growth in the market during the same period, driven by a host of factors including the increasing commercial aircraft fleet size to support rising passenger traffic, opening of assembly plants of Boeing and Airbus in China, upcoming indigenous commercial and regional aircraft (COMAC C919 and Mitsubishi MRJ), and rising aircraft fleet size

The supply chain of this market comprises raw material suppliers, insert manufacturers, tier players, and end-user/OEMs. The key players in the global potted-in inserts market are PCC Fasteners (Shur-Lok Company), Arconic Fastening System, Lisi Aerospace, Witten Company Inc., and The Young Engineers. New product development and long-term supply agreements are the key strategies adopted by the major players to gain a competitive edge in the market.
