## **Abstracts**

This is the ONGOING report. If ordered it could be delivered in 2-3 weeks timeframe.

This report, from Stratview Research, studies the global aerospace and defense ducting systems market over the period 2010 to 2021. The report provides detailed insights on the market dynamics to enable informed business decision making and growth strategy formulation based on the opportunities present in the market.

The Global Aerospace and Defense Ducting Systems Market: Highlights

The ducting system is used in the low as well as high pressure and temperature areas of fixed winged and rotary winged aircraft, for both civil and military applications.

High pressure ducting systems are deployed throughout the aircraft, from the engines,

through the fuselage, to the leading edges of the wings. The major applications of high pressure ducting systems are environmental control systems (ECS), engine bleed air, thermal anti-ice systems, APU air intake/exhaust, fuel tank inerting systems and engine starter duct systems. All the major players are using high temperature metals, such as titanium and stainless steel, and composites to provide optimum ducting system solutions.

Low pressure ducts are used in the low temperature and low pressure applications, such as cabin sidewall riser duct, transition duct, acoustic silencer, windscreen demisting, flight deck air distribution, flight deck instrumentation cooling, avionics ventilation, cabin recirculation, and air conditioned supply. Composites and aluminum are the most preferred materials for low pressure ducting systems.

The aerospace & defense ducting systems market offers a robust growth opportunity during the forecast period of 2016 to 2021. High pressure ducting system segment is likely to remain the largest type during the forecast period. Composite ducts are likely to gain share in the next five years by replacing the metallic ducts.

Commercial aircraft is expected to remain the growth engine of the global aerospace & defense ducting systems market during the forecast period. North America is expected to remain the largest market for ducting system in the next five years. Asia-Pacific region is likely to experience the fastest growth during the forecast period, driven by demand of ducting systems in emerging economies, such as China and India.

The supply chain of this market comprises raw material manufacturers, ducting system manufacturers, engine OEMs, and aircraft OEMs, and airline companies. The key aerospace engine manufacturers are CFM, GE Aviation Engines, and Pratt & Whitney and key aircraft OEMs are Boeing, Airbus, Lockheed Martin, Bombardier, Embraer, ATR, Cessna, and Gulfstream.

The key ducting system manufacturers for aerospace & defense industry are Senior Aerospace, Eaton Aerospace, Zodiac Aerospace, ITT Aerospace, Flexfab, and Unison Industries. New product development, long term contracts, and collaboration with OEMs are the key strategies adopted by the key players to gain competitive edge in the market.
