Abstracts

This is the ONGOING report. If ordered it could be delivered in 2-3 weeks timeframe.

This report, from Stratview Research, studies the global aerospace fairings market over the period 2010 to 2021. The report provides detailed insights on the market dynamics to enable informed business decision making and growth strategy formulation based on the opportunities present in the market.

The Global Aerospace Fairings Market: Highlights

There are many areas in an aircraft where fairings are used. Some of the fairing types as wing to body fairing, flap track fairing, engine cowl, fillet fairing, vertical fin fairing, wheel well fairing, and strut-to-wing and strut-to-fuselage fairing. The primary function of an aircraft fairing is to reduce the form and interference drag, and smoothen the aircraft surface.

Wing to body, engine cowl, and flap track are the major fairing types in the global aerospace industry. A Wing to body fairing not only joins wings to the fuselage, but also provides a housing for the landing gear, fuel, and various inlets and exhausts.

Engine cowls are one of the major components of the aircraft engine and nacelle system. They reduce parasitic drag by reducing the surface area and provide a smooth surface, thus leading to laminar flow.

The global aerospace and defense fairing market offers a good growth opportunity during the forecast period of 2016 to 2021. Increasing commercial aircraft deliveries, growing aircraft fleet size, and advancement in the technology are some of the key growth drivers of the global aerospace fairing market.

Aircraft fairings are made up of the metal as well as composite materials. Composite materials are gaining traction and are expected to experience the highest growth rate in the next five years, driven by their benefits, such as lightweight, excellent specific strength, high fatigue strength, and high corrosion resistance.

North America is expected to remain the largest market for aircraft fairings due to being the manufacturing base of the largest commercial OEM (Boeing) and increasing retrofit market. Asia Pacific is expected to grow at the highest rate in the next five years due to upcoming commercial and regional aircraft and large commercial aircraft fleet size which is the largest in the world.

The supply chain of this market comprises raw material suppliers, fairing manufacturers, Aircraft OEMs, and Airline companies. The key aerospace OEMs are Boeing, Airbus, Bombardier, Embraer, ATR, and Mitsubishi Heavy Industries and key airline companies are Lufthansa, Delta Air, Air China, and Singapore Airlines.

The key fairing manufacturers are UTC Aerosystems, ShinMaywa Industries Ltd., Alenia Aermacchi S.p.A., Avcorp Industries Inc., FACC AG, and Korean Air Aerospace Division. New product development and long term contracts are the key strategies adopted by the key players to gain competitive edge in the market.
