Abstracts

This is the ONGOING report. If ordered it could be delivered in 2-3 weeks timeframe.

This report, from Stratview Research, studies the global aerospace oxygen systems market over the period 2010 to 2021. The report provides detailed insights on the market dynamics to enable informed business decision making and growth strategy formulation based on the opportunities present in the market.

The Global Oxygen Systems Market in the Aerospace Industry: Highlights

The global oxygen systems market in the aerospace industry offers a good growth opportunity and is likely to witness 5.5% CAGR during the forecast period of 2016 to 2021. Increasing commercial and regional aircraft deliveries, high growth of wide body aircraft, and growing aircraft fleet size are the key drivers of the global aerospace oxygen systems market.

Passenger oxygen system is expected to remain the largest segment during the forecast period. Higher number of passenger oxygen systems in an aircraft cabin than crew oxygen systems and higher replacement rate are the major drivers for the passenger oxygen systems market.

In terms of mechanism type, chemical oxygen system is expected to exhibit the fastest growth during the forecast period. Chemical oxygen system generally comprises sodium chromate (NaClO_3) along with smaller amounts of other chemicals and converts these chemicals into oxygen flow when the source is activated. This system is installed in the overhead stowage bin above the passenger seat. The high growth in the largely attributed by the FAA mandate on the use of the chemical oxygen system in the aircraft carrying more than 20 passengers.

North America is expected to remain the largest market for aerospace oxygen systems during the forecast period. Manufacturing base of Boeing and Bombardier aircraft in the US & Canada and increasing commercial, regional, and general aviation fleet size are the major drivers for the North American dominance in the global aerospace oxygen systems market.

The aerospace oxygen systems market in Asia-Pacific and Rest of the World is relatively small since the oxygen systems are fitted during the final assembly of the aircraft and most of the major aircraft manufacturers have their assembly plant in the North America and Europe. The Asia-Pacific market is mainly driven by production of commercial and regional aircraft in China and Japan and the demand of oxygen systems in the retrofit market.

The supply chain of this market comprises raw material suppliers, component manufacturers, oxygen system manufacturers Aerospace OEMs and airline companies. The key aerospace OEMs are Boeing, Airbus, Embraer, Bombardier, ATR, Cessna, and Gulfstream. The key airline companies are Lufthansa, American Airlines, Delta Airlines, Air Asia Airlines, and China Airlines.

The global aerospace oxygen systems market is a highly consolidated with a few large players dominating the market. The key oxygen system manufacturers are C&D Zodiac, B/E Aerospace, Air Liquide, Cobham Plc, Ventura Aerospace, and Technodinamika Holding. New product development, such as lightweight oxygen systems, long term contracts, and collaboration with customers are the key strategies adopted by the key players to gain competitive edge in the market.
