Abstracts

This is the ONGOING report. If ordered it could be delivered in 2-3 weeks timeframe.

This report, from Stratview Research, studies the global aerospace winglet system market over the period 2010 to 2021. The report provides detailed insights on the market dynamics to enable informed business decision making and growth strategy formulation based on the opportunities present in the market.

The Global Aerospace Winglet System Market: Highlights

Winglets are wing tip extensions which provide several benefits to airline companies, such as higher fuel efficiency. They cut the drag on an aircraft by reducing the whirling air at the edges of the wings and improve overall performance. Another benefit of winglets is that they reduce the strength of wingtip vortices, which trail behind the plane. When other aircraft pass through these vortices, the turbulent air can cause loss of control, possibly resulting in an accident.

There are several type of winglets used in the aerospace industry, such as mini winglet, blended winglet, sharklet winglet, split scimitar winglets, raked wingtips, and many more. The design of the winglet has a direct impact on the overall performance of the aircraft. For instance, Blended winglets offer 4% to 5% increase in fuel efficiency than the aircraft without the winglets.

The global aerospace winglet system market offers a robust growth opportunity during the forecast period of 2016 to 2021. Increasing commercial and regional aircraft deliveries, high focus on fuel efficient aircraft, technology advancement, and growing need for upgrading the fleet size are the key drivers in the global aerospace winglet system market. Automated process for composite structure fabrication is gaining traction in the aircraft winglet market.

The supply chain of this market comprises raw material manufacturers, winglet manufacturers, aerospace OEMs, and airline companies. The raw material manufacturers are Rio Tinto, Toray Industries, Hexcel, M C Gill, and Cytec. The key aerospace OEMs are Boeing, Airbus, Comac, Bombardier, Embraer, Cessna, and Gulfstream.

There are independent winglet manufacturers as well as OEMs with in-house winglet manufacturing capability. The key winglet manufacturers are Korean Air Aviation, RUAG Aerostructures, FACC AG, GKN Aerospace, and BLR Aerospace LLC. New product development, collaboration with OEMs and winglet designers, and long term contacts are the key strategies adopted by the key players to gain competitive edge in the market.
