Abstracts

This report, from Stratview Research, studies the global flash chromatography market over the period 2017 to 2022. The report provides detailed insights into the market dynamics to enable informed business decision making and growth strategy formulation based on the opportunities present in the market.

The Global Flash Chromatography Market: Highlights

The global flash chromatography market was valued at US\$ 210.7 million in 2016 and is projected to grow at a healthy CAGR of 5.5% over the next five years to reach US\$ 294.1 million in 2022. Advancement in the chromatography technology including increased automation in the chromatography instruments, increasing demand for purification and filtration by the pharmaceutical and biotech companies and increasing government investments in the pharmaceutical and biotech industries are some of the major factors driving the growth of flash chromatography market during the forecast

period.

The global flash chromatography market is segmented based on sales type as systems and consumables. The consumables segment is projected to remain the largest in the total market during the forecast period. Rising complexity of the applications for flash chromatography demanded by the end users and rise in the procurement of advanced technology consumables for achieving the highest purification rate are the major growth drivers for consumables in the flash chromatography market.

Based on the technique type, the reverse phase occupied the highest share in the global flash chromatography market in 2016, driven by its varied applications and benefits. It is also projected to remain the most dominant and fastest-growing technique during the forecast period. Continuous increase in the procurement of reverse phase chromatography by the pharmaceutical and biotech companies for protein purification and increased usage of aqueous solutions for making the sample by major countries across the globe would remain the major growth drivers of this technique. Other major techniques are ion exchange, size exclusion and chiral separation.

Based on the end-use industry type, the global flash chromatography market is segmented as Pharmaceutical, Biotechnology, Contract Research Organization (CRO), Academia, Chemical, and other industries. Pharmaceutical industry is projected to remain the most dominant and fastest-growing segment of the flash chromatography market during the forecast period. The major applications of flash chromatography in the pharmaceutical and biotechnology industries, such as bile acid purification in lead generation in drug discovery, impurity isolation purification, and protein purification, are likely to propel the growth of the segment during the forecast period.

North America is expected to remain the largest market for flash chromatography market during 2017-2022, driven by higher procurement of analytical equipment and the presence of a large number of manufacturers in this region. Asia-Pacific is likely to witness the highest growth during the same period (2017-2022), owing to the rise in procurement of flash chromatography systems led by appraisals in government investments in Asian countries.

The supply chain of this market comprises raw material suppliers, flash chromatography system and consumable manufacturers and end-users. The component suppliers include companies, such as VWR and W R Grace and Company. These component suppliers provide the raw materials of flash chromatography to flash chromatography manufacturers, such as Biotage AB, Thermo Fisher Scientific Inc., Shimadzu

Corporation, PerkinElmer, Inc., GE Healthcare, Agilent Technologies, Inc., and Tosoh Corporation. The end-use industries include pharmaceutical, biotechnology, contract research organization, academia, chemicals and many other industries.
