Abstracts

Asia Pacific Artificial Heart Market is anticipated to rise at an impressive rate through 2028 due to the increasing number of heart strokes, coronary heart disease (CHD), and other heart-related disorders. Moreover, developing unhealthy lifestyles of people, which include their food habits, alcohol consumption, cigarette smoking, and others, is further contributing to the growth of the market.

An artificial heart is a pump-like device that is surgically placed inside the chest by replacing the patient's original heart. It saves the person's life by removing the damaged ventricles and valves through surgeries. Multiple initiatives taken by the government to improve people's health and the establishment of more heart care hospitals every year are further expected to drive the market in the forecast period. A considerable rise in the geriatric population of the region in passing years is one of the major reasons behind the development of the Asia Pacific Artificial Heart Market.

Growing Prevalence of Cardiac Disorders

According to a meta-analysis project, Asia Pacific Cohort Studies Collaboration (APCSC), after going through more than 650,000 individual data, it has been concluded that within 44 different countries of the Asia Pacific region, major risk factors which are

leading to both fatal and non-fatal disorders are, diabetes mellitus (DM), blood pressure, hypertension, and smoking habits of people. Moreover, a person's serum cholesterol level is the main reason which is increasing the number of coronary heart diseases (CHD) in the region. According to the National Center for Biotechnology Information National Library of Medicine, it has been reported that in 2020, Asia-Pacific countries like Australia and Singapore ranked high for coronary heart diseases (CHD), resulting in a mortality rate of more than 150 deaths per 100,000. Another crucial reason which remains the leading cause of death in the Asia-Pacific region is the rising cases of cardiovascular diseases (CVD). Artificial heart implantation is the only possible procedure that is the most effective and life-saving treatment considered by doctors, which can decrease the mortality rate in the region caused by cardiac disorders. As per the Journal of the American College of Cardiology (JACC) report, CVD was the leading cause of death in Asia in 2019, causing 10.8 million deaths, which was approximately 35% of the total deaths in Asia. 39% of these CVD deaths were premature (defined as the death of a person aged

1.PRODUCT OVERVIEW

- 1.1.Market Definition
- 1.2.Scope of the Market
 - 1.2.1.Markets Covered
 - 1.2.2.Years Considered for Study
 - 1.2.3.Key Market Segmentations

2.RESEARCH METHODOLOGY

- 2.1.Objective of the Study
- 2.2.Baseline Methodology
- 2.3.Key Industry Partners
- 2.4.Major Association and Secondary Sources
- 2.5.Forecasting Methodology
- 2.6.Data Triangulation & Validation
- 2.7.Assumptions and Limitations

3.EXECUTIVE SUMMARY

- 3.1.Overview of the Market
- 3.2.Overview of Key Market Segmentations
- 3.3.Overview of Key Market Players
- 3.4.Overview of Key Regions/Countries
- 3.5.Overview of Market Drivers, Challenges, Trends

4.IMPACT OF COVID-19 ON ASIA PACIFIC ARTIFICIAL HEART MARKET

5.CLINICAL TRIAL ANALYSIS

- 5.1.Ongoing Clinical Trials
- 5.2.Completed Clinical Trials
- 5.3.Terminated Clinical Trials
- 5.4.Breakdown of Pipeline, By Development Phase
- 5.5.Breakdown of Pipeline, By Status
- 5.6.Breakdown of Pipeline, By Study Application
- 5.7.Breakdown of Pipeline, By Country

5.8.Clinical Trials Heat Map

6.VOICE OF CUSTOMER

7.ASIA PACIFIC ARTIFICIAL HEART MARKET OUTLOOK

7.1.Market Size & Forecast

7.1.1.By Value

7.2.Market Share & Forecast

7.2.1.By Type (Ventricular Assist Device, Total Artificial Heart, Others)

7.2.2.By Power Source (Internal Battery, External Battery)

7.2.3.By End User (Hospitals & Specialty Clinics, Ambulatory Care Centers, Others)

7.2.4.By Country

7.2.5.By Company (2022)

7.3.Market Map

7.3.1.By Type

7.3.2.By Power Source
