## **Abstracts**

Factors such as high cost of exploration and growing need to improve production of extra heavy crude oil are driving the enhanced oil recovery market in Asia-Pacific. Countries such as China, India, South Korea and Indonesia accounted for 80% of the total consumption in Asia-Pacific. The regional market for EOR is anticipated to increase marginally until 2022, due to slump in crude oil prices. Loss in the profit margins due to the low crude oil prices would forbid the producers to increase oil production in the region, thus positively affecting the EOR market. Slow increase in the APAC EOR market by volume is due to the low crude oil prices, lesser production and slowdown in the Chinese economy. However, the market is anticipated to record better prospects after 2022.
